Datasheet

Diffuse or Retroreflective Sensor for Error Proofing of Bin-Picking Operations

- One-component system, easy to mount and even easier to use. Automatically operates in either diffuse or retroreflective mode, depending on the application
- Automatic setup and adjustment; wide beam pattern provides easy alignment
- Range up to 2 m (6.5 ft) when used with retroreflective target; 400 mm (15.7 in) when used in diffuse mode
- Large job lights on either side of the metal housing can be remotely controlled to initiate user action with a solid or a blinking green light; job lights turn red to indicate bin-picking errors
- Compact package size; only 30 mm wide × 15 mm deep (1.2 in × 0.6 in)
- Available in 2 lengths to fit existing parts bin sizes and configurations
- Easy DIP-switch adjustments: PNP/NPN output, normally open/normally closed operation, solid/flashing job light, and gate polarity for job light activation
- Two LEDs indicate power ON and output ON
- Choose 2 m (6.5 ft) unterminated cable or 2 m (6.5 ft) cable with 5-pin Euro-style quick-disconnect connector
- Heavy-duty protective brackets available
- 12 V dc to 30 V dc operation

WARNING: Not To Be Used for Personnel Protection

Never use this device as a sensing device for personnel protection. Doing so could lead to serious injury or death. This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

Overview

The PVD Series Parts Verification Sensor is a one-component, easy-to-use light screen suited to many part assembly, bin picking (pick-to-light), and error-proofing applications. The PVD increases task efficiency due to simplified job training, increased quality control (no skipped components), and reduced rework and inspections. It speeds the resumption of work after breaks and other distractions, and is ideal for multilingual workplaces where communication is an issue.

The PVD self-contained, solid-state emitter/receiver array is capable of functioning in either diffuse or retroreflective sensing mode. No configuration is required for this selection. If a retroreflective target is installed opposite the sensor, it will function in retroreflective mode. If not, it will function in diffuse mode. The sensor’s ongoing self-adjustment feature requires no user adjustment; the sensor adapts to the sensing conditions after 15 seconds when blocked. Sensor range decreases when no retroreflector is installed.

The DIP-switch-selectable PNP/NPN output interfaces to a system controller, which is pre-programmed for a specific sequence of tasks. Mounted with its visible red beams stretching across each parts bin, the sensor job light signals the assembler which bins contain items to be picked in a given operation and in what order they should be picked.

As the assembler takes a part in sequence and breaks the beam, the sensor senses that the part was removed and it sends an output signal to the controller. The controller then verifies if the correct part was taken and may respond by turning that job light OFF, activating the job light of the next bin in the sequence. If the assembler reaches into a bin out of sequence, the PVD turns on its output to signal the system controller and turns on its red job light to signal the assembler that an incorrect pick has occurred.

Standard configuration options are selected by means of a bank of four DIP switches behind a press-on black rubber cover. DIP switch options include: PNP or NPN output, Normally Open or Normally Closed operation, steady or flashing job light, and job light control input.

• To order the 9 m (30 ft) cable model, add the suffix "W/30" to the cabled model number. For example, PVD100 W/30.
• To order the 150 mm (6 in) cable model with a quick disconnect, add the suffix "W/6IN" to the cabled model number. For example, PVD100Q W/6IN.
• Models with a quick disconnect require a mating cordset.
Installation

Multiple sensors located farther than the sensor's maximum range from one another are unlikely to cause crosstalk problems. However, when multiple sensors are mounted in a confined area, take care to avoid crosstalk between them. Alternate the relative position of adjacent sensors and/or reflectors. Sensors positioned above or below one another should not create crosstalk difficulties. Mount the sensor and reflector parallel.
Mounting

The wide beam pattern of PVD sensors simplifies their alignment. M4 stainless steel fasteners and two stainless steel brackets are included with each sensor. Mount the sensor and its reflector, if used, parallel to one another in the same plane, and their tops and bottoms aligned.

1. From a common point of reference, make measurements to locate the sensor and its reflector, if used, in the same plane with their midpoints directly opposite each other.
2. Mount the included brackets to the top and bottom of each sensor, as shown.
3. Mount the sensor in its brackets and the reflector, if used, being careful to position the sensor’s red lenses directly facing the reflector.
4. Measure from one or more reference planes (for example, the building or bin floor) to the same point(s) on the emitter and receiver to verify their mechanical alignment. (If the sensors/reflectors are mounted exactly vertical or horizontal, a carpenter’s level may be helpful. A straightedge or a string extended between the sensor and the bin wall may also be helpful.)
5. Also check "by eye" for line-of-sight alignment.
6. Make any necessary final mechanical adjustments, and hand-tighten the bracket hardware.
7. After the electrical hookup is complete, check for beam alignment. If necessary, re-align the emitter and receiver at that time.

Wiring

All models feature integral 2 m (6.5 ft) long, 3.3 mm (0.13 inch) diameter PVC-jacketed cables. Models whose model numbers end in "Q" are terminated with quick-disconnect (QD) Euro-style 5-pin connectors; other models have unterminated ends. Optional mating QD cables are available. Either 4-pin or 5-pin QD cables may be used; the center pin of a 5-pin cable (gray wire, pin 5) is unused in normal operation. Wiring is functionally identical for cabled and quick-disconnect models.

12-30V dc

See Configuration on page 3 for job light control input requirements.

Configuration

To configure the PVD, set the DIP switches as shown, using the supplied plastic screwdriver to avoid damaging the switches or causing a short circuit.

<table>
<thead>
<tr>
<th>Cover Removal</th>
<th>Cover Replacement</th>
</tr>
</thead>
</table>
Cover Removal

Insert a fingernail or small screwdriver into the slot; apply gentle pressure, angling away from the sensor lens. The cover will remain tethered to the sensor housing.

Cover Replacement

To replace the switch cover, align one edge of the cover with the edge of the sensor housing opening. Then press the front corners into place.

The switches determine four status operating modes:

### PVD Configuration DIP Switch Settings

<table>
<thead>
<tr>
<th>Switch</th>
<th>Condition</th>
</tr>
</thead>
</table>
| 1      | ON = PNP output  
OFF = NPN output |
| 2      | ON = Normally Open  
OFF = Normally Closed |
| 3      | ON = Job light steady  
OFF = Job light flashes |
| 4      | **Job light control input:** Connect the white wire as follows: |
|        | **PNP Output**  
ON = Job light ON for +10 to 30V dc (29kΩ input impedance)  
OFF = Job light ON for 0 to 1.5V dc/open circuit |
|        | **NPN Output**  
ON = Job light ON for +10 to 30V dc/open circuit  
OFF = Job light ON for 0 to 1.5V dc (10kΩ input impedance) |

Specifications

**Supply Voltage and Current**
- **Input Voltage:** 12 V dc to 30 V dc (10% maximum ripple at 10% duty cycle)
- **Input Current:** less than 88 mA at 12 V dc, less than 75 mA at 24 V dc and less than 72 mA at 30 V dc (exclusive of load)

**Supply Protection Circuitry**
Protected against reverse polarity and transient overvoltages

**Sensing Beam**
Visible red, 630 nm

**Sensing Range**
- **Retroreflective applications:** 2 m (6.5 ft) using 25 mm (1 in) wide retroreflective tape
- **Diffuse applications:** 400 mm (15.7 in) with 18% reflectivity gray card target

**Sensing Height**
- 4-channel models: 111 mm (4.4 in)
- 8-channel models: 240 mm (9.4 in)

**Beam Spacing**
28.6 mm (1.125 in)

**Output Configuration**
User-selectable via DIP switch:
- 1 open-collector PNP (current sourcing) or 1 open-collector NPN (current sinking)

**Output Rating**
150 mA maximum
- OFF-state leakage current: less than 10 microamps
- ON-state saturation voltage:
  - NPN — less than 1 V dc at 150 mA
  - PNP — less than 2 V dc at 150 mA

**Required Overcurrent Protection**

**WARNING:** Electrical connections must be made by qualified personnel in accordance with local and national electrical codes and regulations.

Overcurrent protection is required to be provided by end product application per the supplied table.

Overcurrent protection may be provided with external fusing or via Current Limiting, Class 2 Power Supply.

Supply wiring leads < 24 AWG shall not be spliced.

For additional product support, go to http://www.bannerengineering.com.

</tbody>
</table>

**Output Protection**
Protected against false pulse on power-up and short circuit of outputs

**Output Response Time**
400 ms (includes standard 100 ms ON-delay and 100 ms OFF-delay)

**Delay at Power-Up**
Less than 1.0 second

**Sensing Resolution**
See Dimensions on page 6 for Minimum Object Detection Zone

- **Retroreflective:** 51 mm at 406 mm range, 100 mm at 2 m (2.0 in dia. at 16 in range, 3.9 in at 6.5 ft); see Figure 2 on page 2
- **Diffuse:** 55 mm dia. at 400 mm range (2.16 in at 15.7 in range)

**Indicators**

- **Green LED:** Power ON/OFF
- **Yellow LED:** Output ON/OFF
- **Job Light** (Diffused Green LED): Turned ON and OFF by applying an external signal to the Job input (white wire). The job lights will be active high or active low, depending on DIP switch 4 selection.
- **Error Light** (Diffused Red LED): Turned ON and OFF by detection of an output event when job light is not ON.

**Indicator Light Lumens**

</tbody>
</table>

**Adjustments**
4 DIP switches, located behind access panel (default setting is ON position)

**Construction**
Black painted aluminum housing; acrylic lenses; thermoplastic polyester end caps; thermoplastic elastomer programming switch cover; stainless steel mounting brackets and hardware

**Connections**
5-conductor PVC-jacketed 2 m (6.5 ft) cable which is either unterminated or terminated with a 5-pin Euro-style quick-disconnect connector, depending on model. Cable diameter is 3.3 mm (0.13 in).

**Environmental Rating**
NEMA 2; IEC IEC IP62

**Operating Conditions**
- **Temperature:** 0 °C to +50 °C (+32 °F to +122 °F)
- **Humidity:** 90% at +50 °C maximum relative humidity (non-condensing)

**Certifications**

#### NOTE:

Standard mounting brackets are included with each PVD System. The following brackets are in addition to the standard brackets.

- **SMBPVA2**: Set of 4 molded brackets
  - Snaps onto standard 28 mm (1.1 in) diameter pipe
  - 2 required per sensor

- **SMBPVA7**: One-piece bracket for mounting to 28 mm (1.1 in) diameter pipe
  - Black-painted steel
  - Requires SMBPVA..C for mounting at an angle ±90°
  - A = M4 x 0.5, B = Ø 5.2, C = Ø 4.2
SMBPVA8
- Heavy-duty 2-part bracket mounts to 28 mm (1.1 in) diameter pipe
- Cold-rolled steel with zinc finish
- Requires SMBPVA..C for mounting
  A=ø 30.5, B=ø 7.1

SMBPVA9
- Pair of two-piece swivel brackets
- Mount directly to sensor or to PVD or PVA protective brackets
- Designed for mounting sensor to “look down”

SMBPVA..C
- Back-mounted bracket for mounting to SMBPVA7 or SMBPVA8 brackets
- Cold-rolled steel with zinc finish

SMBPVD..A & SMBPVD..AB
- Heavy-duty protection brackets
- Some models include DIP-switch access port
- Cold-rolled steel with zinc finish
- May be used with SMBPVA..C for mounting to SMBPVA7 or SMBPVA8 brackets

Models with DIP Switch Access Port | Models with No DIP Switch Access | L
---|---|---
SMBPVD100A | SMBPVD100AB | 140 mm (5.5 in)
SMBPVD225A | SMBPVD225AB | 269 mm (10.6 in)
