## Setting Up a Basic Inspection

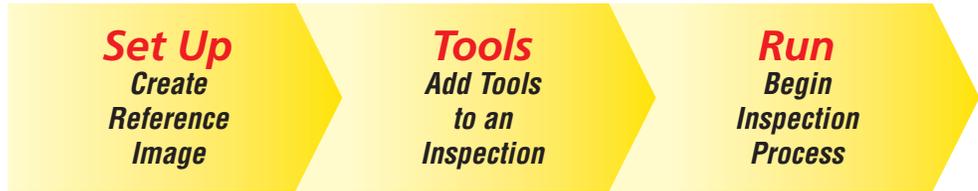

### Purpose:

Creating a P4 GEO inspection requires the user to configure the inspection via interface software. The following steps guide the user through setup of a basic inspection.

### Overview: Inspection Process using P4 Software

### Before You Start:

- Install Software
- Confirm PC & Sensor are communicating
- Fixture Sensor & Target

## SET UP

The Setup Menu captures a reference image and sets the trigger options

SCREEN	USER ACTION	NOTES
	<ol style="list-style-type: none"> <li>1 Click <b>Start</b></li> <li>2 Click <b>Next</b></li> <li>3 Select <b>Create a new inspection</b></li> <li>4 Click <b>OK</b></li> </ol>	<ul style="list-style-type: none"> <li>• In Auto Exposure, the sensor adjusts exposure and gain level for optimum contrast. If the Auto Exposure routine does not produce the desired results, manually adjust the exposure time and gain.</li> <li>• If the image is not updating, click <b>Continuous</b> under Trigger Options.</li> <li>• Use the <b>Focus</b> number to optimize the image quality. The higher the number, the better.</li> <li>• If the <b>Focus</b> number remains at zero, disable firewall software on the computer.</li> <li>• Clicking <b>Next</b> exits the Setup screen to enter the Tools screen.</li> </ul>
	<ol style="list-style-type: none"> <li>3</li> <li>4</li> </ol>	

## TOOLS

The Tools Menu allows the user to build, view, and modify an inspection

### SCREEN

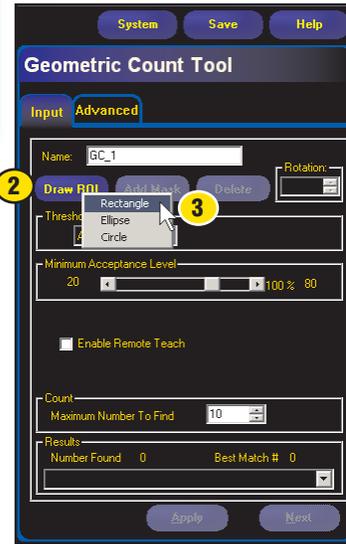

### USER ACTION

- 1 Click **Geometric Count**
- 2 Click **Draw ROI**
- 3 Select **Rectangle**
- 4 Click, Hold, and Drag ROI around the feature to be inspected.
- 5 Select **Enable Remote Teach**
- 6 Click **Advanced** tab

### NOTES

- Geometric Count will add a geometric count tool to the tool list in the Navigation/Results window.
- **Region of Interest (ROI)** indicates the feature the sensor will search in its **Field of View (FOV)**.
- Enlarge or reduce the ROI by clicking the outer edge of the ROI.

## TOOLS >> Advanced Tab

### SCREEN

### USER ACTION

- 7 Enter **Rotation Range** values
- 8 Click **Apply**
- 9 Click **Back**
- 10 Click **Next**

### NOTES

- The default **Rotation Range** is +45, -45. For a full 360 degree rotation, +180, -180 should be used.
- By clicking **Apply**, the edges (in blue) that constitute the geometric pattern and the edges in the search area are shown.
- The sensor has now been told to find a pattern.
- Clicking **Next** exits the Geometric Count Tool.

**TOOLS >> Test**

**SCREEN**

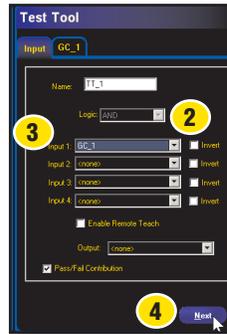

**USER ACTION**

- 1 Click **Test**
- 2 Click **Input 1 Drop-Down Arrow**
- 3 Select **GC\_1**
- 4 Click **Next**

**NOTES**

- The Test Tool determines the pass/fail condition of the inspection and can drive an output.
- Clicking **Next** exits the Test Tool to enter the Tools screen.

**TOOLS >> Quick Teach**

Quick Teach sets the Test Tool so that it will pass the reference image

**SCREEN**

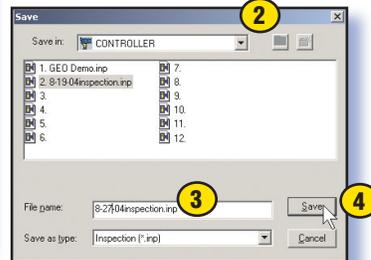

**USER ACTION**

- 1 Click **Quick Teach**
- 2 Select **Inspection Location**
- 3 Type **Inspection Name**
- 4 Click **Save**

**NOTES**

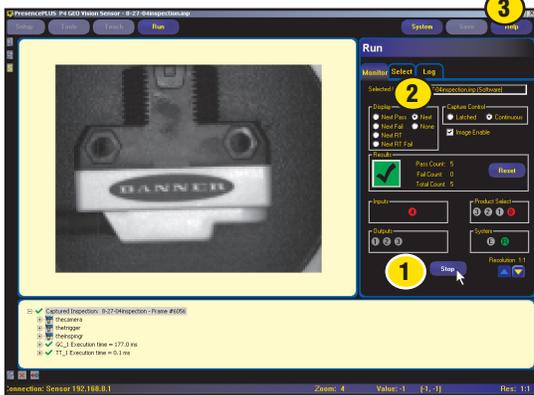

- Quick Teach takes the current number of patterns found from GC\_1 tool and imports those values (min = 1, max = 1) into the Test Tool automatically.
- The user can manually set the min/max values in the Test Tool GC\_1 tab.
- The P4 GEO sensor has 12 inspection locations.

**RUN**

The Run Menu monitors the inspections

**SCREEN**

**USER ACTION**

- 1 Click **Start** at the bottom of the run window.
- 2 Select **Next** from **Display** section.
- 3 Close Software Program in the Run Mode by clicking the **X** in the upper right corner.

**NOTES**

- After the inspection is saved to the sensor, the RUN screen is displayed.
- Trigger the sensor with an external trigger.
- = Pass = Fail
- The sensor continues to run after the software is closed.
