The following caution applies to UV365 nm models:

CAUTION:

Risk Group 1: UV Emitted from this product.

Minimize exposure to eyes or skin. Use appropriate shielding and eye protection. Risk Group 1 (RG 1) products are safe for most use applications, except for very prolonged exposures where direct ocular exposures may be expected.

- IEC 62471

The following caution applies to UV395 nm models:

CAUTION:

Risk Group 2: UV Emitted from this product.

Eye or skin irritation may result from exposure. Use appropriate shielding and eye protection. Risk Group 2 (RG 2) products generally do not pose a realistic optical hazard if aversion responses limit the exposure duration or where lengthy exposures are unrealistic.

- IEC 62471

Dual Intensity Control

The LED..LA..X..6-P..Q Series Linear Array Lights have a potentiometer and an analog wire that control the intensity of the light from maximum brightness (0 V dc) to dark (10 V dc). The potentiometer set to full counter-clockwise is equivalent to 10 V dc; set to full clockwise it is equivalent to 0 V dc. Generally, users will control the intensity using either the potentiometer or the analog (gray) wire independently. If using the potentiometer to control intensity, apply 0 V dc to the analog (gray) wire; if using the analog (gray) wire to control intensity, set the potentiometer to maximum intensity in its full clockwise position.

¹ UV365 is only available in models with a glass window.

If using the potentiometer and analog (gray) wire together to control intensity, it is important to note that, either control applying any voltage greater than 0 to the light reduces the maximum achievable intensity. For example, assume you want a maximum light intensity of 50%, with further adjustability down to dark:

Initial Setting	Available Adjustment for Other Control
Potentiometer sets maximum intensity to 50% (midway point between clockwise and counter-clockwise)	Analog (gray) wire can adjust between 5 V dc and 10 V dc
Analog (gray) wire sets maximum intensity to 50% (5 V dc)	Potentiometer can adjust from ½ counter-clockwise to full counter-clockwise

Note: The range of intensity of the light is from 100%, down to just below 10% before the light goes completely dark.
