Powerful Capabilities

Scalable
Banner wireless networks grow with your needs. Simple wire replacement products are preconfigured to support up to six Nodes and can be expanded to accommodate as many as 47 Nodes using the configuration software.

Reliable
Good signal strength assures uninterrupted communication. Banner offers an integrated site survey capability to evaluate and ensure good radio signal strength prior to installation.

Sophisticated Functionality

Engineered Simplicity
Long Range

Designed for long distance applications, Banner wireless networks are capable of up to six miles of line-of-sight coverage, making them an ideal solution for applications in remote and difficult to access locations or where running wire or conduit is impractical or too expensive.

Easy-to-Use

Banner’s Simple Wire Replacement product line provides flexible networks that are easy to set up without software. Setting up a basic point-to-point network is as easy as pairing a cell phone to a headset.

Secure

Binding radio Nodes in a network locks them to a specific Gateway. After the devices are bound, each Gateway only accepts data from the Nodes that are bound to it.
Sensors, Lighting and Indicators

Wireless sensors, lighting, and indicators allow you to remotely monitor and diagnose systems quickly, which reduces downtime, increases productivity, and provides data to optimize your operation. They are easy to install and set up, eliminate expensive cable runs, and can integrate machines that were not previously network capable.
Temperature and Humidity Sensor

M12FTH4Q and M12FT4Q

A simple way to verify conditions in locations that were once too difficult to access via traditional monitoring methods. With no software required, you can replace cables and extend the range of temperature and humidity signals with minimal effort.

Key Features:
- Achieves temperature accuracy of ± 0.3 °C and humidity accuracy of ± 2% relative humidity
- Temperature and relative humidity sensing elements housed in a robust metal housing
- Traceable to NIST standards
- Temperature and Humidity or Temperature-only Sensor to choose from
- Each sensor comes with a Certificate of Factory Calibration
- Reduces labor costs by obviating manual checks and reducing error
**Models Description**

- **M12FTH4Q**: Temperature and relative humidity via a 1-wire Serial Interface
- **M12FT4Q**: Temperature via a 1-wire Serial Interface

**Use with**

- **DX80N9Q45TH**
  - Q45 Temperature/Humidity Node with integrated batteries

Temperature and Humidity Sensor

M12FTH3Q and M12FT3Q

This temperature and humidity solution works in a variety of environments to wirelessly provide temperature and humidity measurements via Modbus RTU, RS-485.

Key Features:
- Achieves humidity accuracy of ±2% relative humidity and temperature accuracy of ± 0.3 °C
- Manufactured with a robust metal housing
- Traceable to NIST standards
- Functions as a Modbus slave device via RS-485

Vibration and Temperature Sensor

The QM42VT Vibration and Temperature Sensor makes it easy to monitor a machine’s health. It measures RMS velocity (among other vibration characteristics) and temperature so that problems can be detected before they become too severe and cause additional damage or result in unplanned downtime. Paired with a Banner wireless Node, it can provide local indication, wirelessly send the signal to a central location, and send the vibration and temperature data to the Gateway for collection and trending.

Key Features:

- Easily monitor machine health by sending info wirelessly to wherever you need it
- Avoid machine failures and delays by detecting problems early
- Reduce downtime and plan maintenance more efficiently
- Monitor a variety of machines to suit your needs

- Motors
- Pumps
- Compressors
- Fans
- Blowers
- Gear Boxes

Select Node: one sensor per Node

Select Gateway: (up to 47 sensors/Nodes) or Data Radio (up to 50+ sensors/Nodes per Master Radio)

Wireless Ultrasonic Sensor

K50U

The Sure Cross® U-GAGE® K50U Ultrasonic Sensor works in a variety of environments to provide a measurement of the distance between the target and the sensor. It is designed for plug-and-play use with the Q45U wireless node, creating a cost-effective and easy-to-use solution for monitoring mobile or remote tanks and totes.

Key Features:

- Provides a distance measurement from the target to the sensor
- Three meter sensing range with a 300 mm dead zone
- Built-in temperature compensation
- Rugged design for demanding sensing environments; rated IEC IP67, NEMA 6P
- Two sensor models available; one with a 1-wire Serial Interface and one that functions as a Modbus slave via RS-485

## K50U Specifications

### Supply Voltage
- 3.6 to 5.5 V dc or 10 to 30 V dc

### Current
- K50UX2RA: Active comms–11.3 mA at 30 V dc
- K50UX1RA: Default sensing–180 μA
- Disabled sensing–40 μA
- Active comms–3.3 mA

### Indicators
- Green flashing: Power ON
- Amber flicker: Serial Tx

### Performance
- Sensing range: 300 mm to 3 m (11.8 in to 118 in)
- Ultrasonic frequency: 114 kHz
- Temperature effect: 0.02% of distance/°C
- Resolution: 0.1% of distance (1.5 mm minimum)

### Discrete Inputs
- One Sinking
- Rating: 3 mA max current at 30 V dc
- ON Condition: Less than 0.7 V
- OFF Condition: Greater than 2 V or open

### Communication Protocol
- K50UX2RA: Modbus RTU
- K50UX1RA: 1-wire Serial Interface

### Environmental Rating
- NEMA 6, IEC IP67

### Operating Conditions
- –40 to 70 °C (–40 to 158 °F)

### Construction
- Housing: PBT polyester
- Transducer: epoxy/ceramic composite

### Connector
- Integral 5-pin M12/Euro-style male quick disconnect (QD)

### Communication Hardware
- K50UX2RA: RS-485 Serial
- K50UX1RA: 1-Wire Serial Interface
- Baud Rates: 9.6k, 19.2k (default), or 38.4k
- Data Format: 8 data bits, No parity (default), even parity, or odd parity 1 stop bit
- Do not use a termination resistor.

### Communications Line
- Level Receive ON: Greater than 2 V
- Level Receive OFF: Less than 0.7 V
- Level Transmit ON: 2.7 to 3 V (pulldown resister of 10 kOhm)
- Level Transmit OFF: 0 V

### Shock and Vibration
- All models meet Mil Std. 202F requirements. Method 201A (vibration: 10 Hz to 60 Hz max., double amplitude 0.06 inch, maximum acceleration 10G). Also meets IEC 947-5-2 requirements: 30G 11 ms duration, half sine wave

### Certifications
- CE mark

Photoelectric Q45 Sensors

The Sure Cross® Q45 is the first self-contained wireless standard photoelectric solution for the most challenging control and monitoring needs. Easily add a scalable wireless sensor network to improve efficiency by monitoring and coordinating multiple machines and processes without pulling cables.

Key Features:
- True self-contained wireless with no cables, cordsets or external power
- 1 km line-of-sight
- Built-in antenna
- Retroreflective and Diffuse models are preconfigured to count up to 960 parts per minute
Photoelectric Q45 Sensor Specifications

Radio (2.4 GHz)
Range: Up to 1000 m (3280 ft) with line of sight
Transmit Power: 65 mW EIRP

2.4 GHz Compliance
FCC ID UE300DX80-2400 - This device complies with FCC Part 15, Subpart C, 15.247
ETSI/EN: In accordance with EN 300 328: V1.8.1 (2012-04)
IC: 7044A-DX8024

Spread Spectrum Technology
FHSS (Frequency Hopping Spread Spectrum)

Construction
Molded reinforced thermoplastic polyester housing, oring-sealed transparent Lexan® cover, molded acrylic lenses, and stainless steel hardware. Q45s are designed to withstand 1200 psi washdown.

Typical Battery Life
Up to 2 years, typical
A typical battery life assumes an average of 10 seconds between sensor changes of state and the default 62.5 millisecond sample rate. Battery life is reduced to 1 year with an average of 1 second between changes of state.

Default Sensing Interval
62.5 milliseconds

Adjustments
Multi-turn sensitivity control (allows precise sensitivity setting - turn clockwise to increase gain.

Sensing Range
Retroreflective: 0.15 m to 6 m (6 in to 20 ft)
Diffuse: 101 mm to 300 mm (4 in to 12 in)
Opposed: Up to 30 m (100 ft) depending on Excess Gain requirements
Glass Fiber Optic: 1½-in focal point

Report Rate
On Change of State

Indicators
Red and green LEDs (radio function); amber LED (only for alignment mode)

Environmental Rating
NEMA 6P, IEC IP67

Operating Conditions
-40 °C to 70 °C (-40 °F to 158 °F); 90% relative humidity at 50 °C (non-condensing)
Q45 1-Wire Serial Models

Q45U, Q45VT and Q45TH

The Q45 1-wire serial nodes are designed to pair with Banner 1-wire serial sensors. The compact size, integrated lithium batteries, and built-in LED indicator light make remote monitoring easy to do.

- The Q45U is a universal 1-wire serial node that reads any Banner 1-wire serial sensor and determines an efficient power setting accordingly. It includes a red/green/yellow/blue LED to provide local indication.

- The Q45VT is designed to pair with the QM42VT1 vibration and temperature sensor; vibration thresholds can be set using dip switches and a built-in LED is pre-mapped to illuminate when a threshold has been exceeded.

- The Q45TH connects directly to the M12FTH4Q temperature and humidity sensor; sample rates can be set using DIP switches, and a red/green LED can be used to provide local indication.

Q45 Switches and Pushbuttons

Q45RD and Q45BL

This Q45 family of products is designed to accept remote dry contact, NAMUR and discrete non-contact switch inputs to be used in many factory automation, remote monitoring and IIoT applications.

- Remote device models are designed to interface with isolated dry contact inputs or NAMUR inductive proximity sensors.
- Button and light models have independently controlled push button inputs and a multi-color LED indicator light.
- Remote discrete non-contact switch models use a magnet to sense the position of mechanical devices, such as doors, levers, valves, and other actuators.

The Sure Cross® Wireless Q120 button and light pendant is an autonomous wireless Node that enables two-way communication between an operator and up to six remote and/or mobile devices. Six independently controlled push-button inputs allow operators to wirelessly send status updates, acknowledgements, initiate processes, and actuate devices.

Key Features:
- DIP switch configurable
- Six push-button inputs with momentary or toggle operation
- Six sets of red and green LED indicator lights with solid or flashing operation
- Reliable, field-proven wireless architecture operates in the globally accepted 2.4 GHz frequency band or the long-range 900 MHz frequency band, depending upon model

Applications:
- Call for parts, service, or pick up
- Motor, fan, pump control and status indication
- Light control

Wireless Tower Light

TL70

Easily add wireless communication and networking capabilities to your tower lights by using Banner’s Wireless Base or Wireless Communication Segment.

Key Features:

- Easily add IIoT remote monitoring capabilities
- Enable Overall Equipment Effectiveness (OEE) data collection to optimize your operation
- Receive timely status information and remote notifications of problems
- Simplify installation by not having to run control wires
- Rugged, water-resistant IP65 housing with UV-stabilized material allows for use in harsh environments
Two options to add wireless communication to tower lights

**Wireless Base**

The Wireless Base provides full bi-directional communication, plus event counter inputs. It can be configured into preassembled tower lights.

**Buy this if:**

- You want to buy a preassembled tower light with wireless connectivity
- You can supply constant power to the light
- Your machines have PNP outputs to the tower light
- Your sole intent is to control light segments via the wireless radio

**Wireless Communication Segment**

The Communication segment adds wireless communication and networking capabilities to any standard TL70 Base, without requiring constant power or expensive wiring.

**Buy this if:**

- You want to add wireless connectivity to an existing TL70 Tower Light
- You can not supply constant power to the light
- Your machines have both NPN and PNP inputs
- You have a TL70 ac base

Wireless Indicator

K70

Wireless K70 Indicators are bright, 70 mm multicolored indicators offering increased communication possibilities and greater versatility in deployment.

Key Features:
- Models are available with up to five colors in one device
- Rugged, water-resistant IP65 housing
- SureCross wireless node built into the base
- 900 MHz and 2.4 GHz wireless options
- Input wires can be configured as auxiliary sourcing inputs from external devices or as a 20 Hz, 32-bit event counter

Applications:
- Clean room status indication
- Loading dock status
- High traffic forklift crossing status

Wireless Touch Button

The K70 Wireless Touch Button is an ergonomic solid-state switch with integrated multicolor indication functions and a wireless Node. Bidirectional wireless communication provides a simple operator interface for many industrial applications.

Key Features:

- Bidirectional wireless communication
- Ergonomically designed to eliminate hand, wrist, and arm stresses associated with repeated switch operation; requires no physical force to operate
- Can be actuated with bare hands or in gloves
- Up to three colors in one touch button; momentary and latching versions available
- Excellent immunity to false triggering by water spray, detergents, oils, and other foreign materials

Applications:

- Pick-to-light
- Call button
- General industrial applications

Controllers

Industrial wireless controllers that facilitate industrial Internet of Things (IIoT) applications.
DXM100 Wireless Controller

The DXM100 Controller is an industrial wireless controller developed to facilitate Ethernet connectivity and Industrial Internet of Things (IIoT) applications. Available with an internal DX80 Gateway or a Multi-Hop Data Radio, this powerful Modbus communications device connects local wireless networks with the internet and/or host systems.

Key Features:
- ISM radios available in 900 MHz and 2.4 GHz for local wireless network
- Converts Modbus RTU to Modbus TCP/IP or Ethernet I/P
- Logic controller can be programmed using action rules and text language methods
- Cellular connectivity
- Micro SD card for data logging
- Email and text alerts
- Local I/O options: universal inputs, NMOS outputs, and analog outputs
- Powered by 12 to 30 V dc, 12 V dc solar panel, or battery backup
- RS-232, RS-485, and Ethernet communications ports; and a USB configuration port
- LCD display for I/O information and user programmable LEDs

DXM100 Wireless Controller

Series         Base

B1 = Modbus controller for data aggregation of sensors and wireless networks
Power: 12–30 V dc/ Solar/ Battery
Comms: RS-485, CAN, RS-232 w/flow or secondary RS-485
Inputs: (4) universal IN
Outputs: (4) NMOS OUT, (2) analog OUT (0–10 V or 4–20 mA)
Power Out: (2) Selected 5 V or 16 V switched power, (1) 5 V courtesy power

B2 = Smart valve control, SDI-12 data collection
Power: 12–30 V dc/Solar/Battery
Comms: RS-485, (1) SDI sensor interface
Inputs: (4) universal IN
Outputs: (4) NMOS OUT, (2) 0–10 V analog, (2) DC Latching
Power Out: (2) Adjustable 5 V to 24 V switched power, (1) SDI switched power, and (1) 5 V courtesy power

S1* = Modbus slave I/O device for MultiHop wireless networks or wired networks
Power: 12–30 V dc/Solar/Battery
Comms: RS-485
Inputs: (4) Universal IN
Outputs: (4) NMOS OUT, (2) Analog OUT (0–10 V or 4–20 mA)
Power Out: (2) Selectable 5 V or 16 V switched power, (1) 5 V courtesy power

S2* = Modbus slave device for valve control, SDI-12 data collection for MultiHop wireless networks or wired networks
Power: 12–30 V dc/Solar/Battery
Comms: RS-485, (1) SDI-12 sensor interface
Inputs: (4) universal IN
Outputs: (4) NMOS OUT, (2) 0–10 V analog, (2) DC Latching
Power Out: (2) Adjustable 5 V to 24 V switched power, (1) SDI switched power, and (1) 5 V courtesy power

* For S1 and S2 models, only order the R2, R4, R5, and R9 radio configurations

Cellular Communication
Controllers accept Banner GSM and LTE modems only. Cellular modems are ordered separately as accessories under the following part numbers:
- GSM/3G (HSPA) – SXI-GSM-001
- LTE – Verizon – SXI-LTE-001

2.4 GHz at 65 mW                                                                                                          |
| **Radio Range**                       | 900 MHz, 1 Watt: Up to 9.6 km (6 miles)  
2.4 GHz, 65 mW: Up to 3.2 km (2 miles)                                                                                           |
| **Minimum Separation Distance**       | 900 MHz, 1 Watt: 4.57 m (15 ft)  
900 MHz, 150/250 mW: 2 m (6 ft)  
2.4 GHz, 65 mW: 0.3 m (1 ft)                                                                                                           |
| **Antenna Connection**                | Ext. Reverse Polarity SMA, 50 Ohms  
Max Tightening Torque: 0.45 N·m (4 lbf·in)                                                                                     |
| **Radio Transmit Power**              | 900 MHz, 1 Watt: 30 dBm (1 Watt) conducted  
2.4 GHz, 65 mW: 18 dBm (65 mW) conducted, less than or equal to 20 dBm (100 mW EIRP)                                    |
| **Compliance**                        | 900 MHz Compliance (1 Watt)  
FCC ID UE3RM1809: This device complies with FCC Part 15, Subpart C, 15.247  
IC: 7044A-RM1809  
2.4 GHz Compliance  
FCC ID UE300DX80-2400 - This device complies with FCC Part 15, Subpart C, 15.247  
ETSI/EN: In accordance with EN 300 328: V1.8.1 (2012-04)  
IC: 7044A-DX8024                                                                                                                      |
| **Spread Spectrum Technology**        | FHSS (Frequency Hopping Spread Spectrum)                                                                                               |
| **Logging**                           | 8 GB maximum; removable Micro SD card format                                                                                           |
| **Protocols**                         | Modbus RTU Master/Slave, Modbus TCP, and Ethernet/IP                                                                                   |
| **Construction**                      | Polycarbonate; DIN rail mount option                                                                                                  |
| **Communication Hardware (RS-232)**   | 2-wire full duplex; flow control  
Baud rates: 9.6k, 19.2k (default), or 38.4k  
Data format: 8 data bits, no parity, 1 stop bit                                                                                   |
| **Communication Hardware (RS-485)**   | 2-wire half duplex RS-485  
Baud rates: 9.6k, 19.2k (default), or 38.4k  
Data format: 8 data bits, odd, even or no parity, 1 stop bit                                                                       |
| **Universal Inputs**                  | Discrete sinking/sourcing, 4 to 20 mA analog, 0 to 10 V analog, 10k thermistor, counter                                              |
| **Courtesy Power**                    | One output at 5 volts, 500 mA maximum                                                                                                 |
| **Switched Power Outputs**            | B1 and S1 models: Two selectable 5 V or 16 V outputs  
5 V: 400 mA maximum  
16 V: 125 mA maximum  
B2 and S2 models: Two adjustable 5 V or 24 V outputs  
One SDi-12 adjustable 5 V to 24 V output  
5 V: 400 mA maximum  
16 V: 125 mA maximum  
24 V: 85 mA maximum                                                                                                               |
| **Environmental Rating**              | IEC IP20                                                                                                                                 |
| **Operating Conditions**              | −40 °C to +85 °C (−40 °F to +185 °F) (Electronics); −20 °C to +80 °C (−4 °F to +176 °F) (LCD)  
Radiated Immunity: 10 V/m, 80-2700 MHz (EN 61000-4-3)                                                                
95% maximum relative humidity (non-condensing)                                                                                       |
| **Shock and Vibration**               | IEC 68-2-6 and IEC 68-2-27  
Shock: 30g, 11 milliseconds half sine wave, 18 shocks  
Vibration: .5 mm p-p, 10 to 60 Hz                                                                                                 |
| **Analog Outputs**                    | 0 to 20 mA or 0 to 10 V dc output  
Accuracy: 0.1% of full scale +0.01% per °C  
Resolution: 12 bit                                                                                                                 |
| **Certifications**                    | ![CE]                                                                                                                                    |
DXM150 Wireless Controller

The DXM150 Controller is an industrial wireless controller developed to facilitate Ethernet connectivity and Industrial Internet of Things (IIoT) applications. Available with an internal DX80 Gateway or a Multi-hop Data Radio, this powerful Modbus communications device has expanded I/O options and connects local wireless networks with the internet and/or host systems.

Key Features:
- ISM radios available in 900 MHz and 2.4 GHz for local wireless network
- Converts Modbus RTU to Modbus TCP/IP or Ethernet I/P
- Logic controller can be programmed using action rules and text language methods
- Cellular connectivity
- Micro SD card for data logging
- Email and text alerts
- Local I/O options: 8 universal inputs, NMOS outputs, and relay and analog outputs
- Powered by 12 to 30 V dc, 12 V dc solar panel, or battery backup
- RS-232, RS-485, and Ethernet communications ports; and a USB configuration port
- LCD display for I/O information and user programmable LEDs

B1 = Modbus controller designed for applications with high I/O count, isolated inputs or integrated relays
- Power: 12-30 V dc/ Solar/ Battery
- Comms: RS-485 and RS-232 / CAN or secondary RS-485
- Inputs: (2) Isolated discrete, (8) Universal
- Outputs: (2) Relay, (4) NMOS, (2) Analog
- Power Out: (2) Jumper selectable between 2.7 V or battery, 4.2 V or incoming power

B2 = Modbus controller for high I/O count applications
- Power: 12-30 V dc/ Solar/Battery
- Comms: RS-485 and RS-232 w/flow control or secondary RS-485
- Inputs: (2) Isolated discrete, (8) Universal
- Outputs: (8) PNP/NPN Selectable, (2) Analog
- Power Out: (2) Courtesy power out; (2) Jumper selectable between 2.7 V or battery, 4.2 V or incoming power

S1* = Modbus slave with high I/O count for MultiHop wireless networks or wired networks
- Power: 12-30 V dc/ Solar/Battery
- Comms: RS-485
- Inputs: (2) Isolated discrete, 8 Universal
- Outputs: (2) Relay, (4) NMOS Discrete, (2) Analog
- Power Out: (2) Jumper selectable between 2.7 V or battery, 4.2 V or incoming power

S2* = Modbus slave with high I/O count for MultiHop wireless networks or wired networks
- Power: 12-30 V dc/ Solar/Battery
- Comms: RS-485
- Inputs: (2) Isolated discrete, (8) Universal
- Outputs: (8) PNP/NPN Selectable, (2) Analog
- Power Out: (2) Courtesy power out; (2) Jumper selectable between 2.7 V or battery, 4.2 V or incoming power
- Outputs: (4) NMOS OUT, (2) 0–10 V analog, (2) DC Latching
- Power Out: (2) Adjustable 5 V to 24 V switched power,
  (1) SOI switched power, and (1) 5 V courtesy power

* For S1 and S2 models, only order the R2, R4, R5, and R9 radio configurations

Cellular Communication

Controllers accept Banner GSM and LTE modems only. Cellular modems are ordered separately as accessories under the following part numbers:
- GSM/3G (HSPA) – SXI-GSM-001
- LTE – Verizon – SXI-LTE-001

| **Logging**                      | 8 GB maximum; removable Micro SD card format  |
| **Protocols**                    | Modbus RTU Master/Slave, Modbus TCP, and Ethernet/IP  |
| **Construction**                 | Polycarbonate; DIN rail mount option  |
| **Communication Hardware (RS-232)** | Interface: 2-wire RS-232  
                          | Baud rates: 9.6k, 19.2k (default), or 38.4k via DIP switches; 1200 and 2400 via the MultiHop Configuration Tool  
                          | Data format: 8 data bits, no parity, 1 stop bit  |
| **Communication Hardware (RS-485)** | Interface: 2-wire half-duplex RS-485  
                          | Baud rates: 9.6k, 19.2k (default), or 38.4k via DIP switches; 1200 and 2400 via the MultiHop Configuration Tool  
                          | Data format: 8 data bits, no parity, 1 stop bit  |
| **Switched Power Outputs**       | 5 Volts/400 mA maximum; 16 V/125 mA maximum  |
| **Environmental Rating**         | IEC IP20  |
| **Operating Conditions**         | –40 °C to +85 °C (–40 °F to +185 °F) (Electronics); –20 °C to +80 °C (–4 °F to +176 °F) (LCD)  
                          | 95% maximum relative humidity (non-condensing)  
                          | Radiated Immunity: 10 V/m (EN 61000-4-3)  |
| **Shock and Vibration**          | IEC 68-2-6 and IEC 68-2-27  
                          | Shock: 30g, 11 millisecond half sine wave, 18 shocks  
                          | Vibration: 0.5 mm p-p, 10 to 60 Hz  |
| **Selectable (Jumper) Power Out** | Output on pin 45, jumper selects 2.7 V or battery  
                          | Output on pin 35, jumper selects 4.2 V or incoming power  
                          | 100 mA maximum  |
| **Discrete Inputs**              | Optically isolated AC input type  
                          | Input to output isolation: 2.5 kV  |
| **Counters, Synchronous**        | 32-bits unsigned  
                          | 10 ms clock rate minimum  |
| **Universal Inputs**             | Sinking/Sourcing discrete, 4–20 mA analog, 0–10 V analog, counter, and temperature 10 kOhm thermistor  |
| **Indicators**                   | Four LEDs, four control buttons, one LCD  |
| **Security Protocols**           | VPN, SSL, and HTTPS  |
| **Analog Outputs**               | 0 to 20 mA or 0 to 10 V dc output  
                          | Accuracy: 0.1% of full scale +0.01% per °C  
                          | Resolution: 12 bit  |
| **Discrete Output Rating (NMOS)** | Less than 1 A max current at 30 V dc  
                          | ON-state saturation: less than 0.7 V at 20 mA  
                          | ON condition: Less than 0.7 V  
                          | OFF condition: Open  |
| **Relay Outputs**                | One; output at 5 volts , 500 mA maximum  |
| **Certifications**               | [Image of CE mark]  |
Industrial Wireless Radios

Banner’s network radios provide the backbone of a very flexible and highly expandable wireless network for industrial environments. Simple wire replacement products easily replace discrete, analog, Serial, and Ethernet signal wires with no setup software needed. The Performance Series centers around a Gateway and up to 47 remotely located Nodes with multiple I/O options. The MultiHop Series uses repeaters to extend the range of the network using multiple “hops” to cover larger distances or to circumvent obstacles (trees, buildings, topology, etc.).
Sure Cross® PM Series

An I/O Radio network that combines long range line-of-sight coverage with ease of deployment and use.

Banner’s PM Series provides a flexible network that easily sets up without software. Setting up a basic point-to-point network is as easy as pairing a cell phone to a headset. You can replace cables and extend the range of digital and analog signals with minimum effort.

Key Features:
- Menu-driven LCD user interface
- No software needed
- IP67-rated housing for demanding environments
- One Gateway is preconfigured to support up to six Nodes
- Choose from two I/O configurations
- Select from multiple I/O maps

Sure Cross® PM Kit

Simple wire replacement is even simpler with Banner’s fully integrated kit.

Plug-and-play with one Gateway and one Node, pre-bound and mapped to solve your first wireless challenge, and provide the start of a flexible network that can be expanded as production needs change.

Key Features:
- Pre-bound and mapped expandable bi-directional radios
- Eight LCD menu selectable I/O mapping options
- IP67-rated housing for demanding environments
- One Gateway is preconfigured to support up to six Nodes

| **Radio Range**               | 900 MHz (1 W): Up to 9.6 kilometers (6 miles)*  
2.4 GHz (65 mW): Up to 3.2 kilometers (2 miles)* |
| **Minimum Separation Distance** | 900 MHz (1 W): 4.57 m (15 ft)  
2.4 GHz (65 mW): 0.3 m (1 ft) |
| **Transmit Power**            | 900 MHz (1 Watt): 30 dBm (1 W) conducted (up to 36 dBm EIRP)  
2.4 GHz: 18 dBm (65 mW) conducted, less than or equal to 20 dBm (100 mW) EIRP |
| **900 MHz Compliance**        | FCC ID UE3RM1809: This device complies with FCC Part 15, Subpart C, 15.247  
IC: 7044A-RM1809 |
| **2.4 GHz Compliance**        | FCC ID UE300DX80-2400 - This device complies with FCC Part 15, Subpart C, 15.247  
ETSI/EN: In accordance with EN 300 328: V1.6.1 (2012-06)  
IC: 7044A-DX8024 |
| **Spread Spectrum Technology** | FHSS (Frequency Hopping Spread Spectrum) |
| **Linked Timeout**            | Gateway: Configurable via User Configuration Tool (UCT) software  
Node: Defined by Gateway |
| **Communication Hardware**    | Interface: 2-wire half duplex RS-485  
Baud rates: 9.6k, 19.2k (default), or 38.4k  
Data format: 8 data bits, no parity, 1 stop bit |
| **Communication Protocol**    | Modbus RTU |
| **Supply Voltage**            | 10 to 30 V dc (Outside the USA: 12 to 24 V dc, ±10%)  
900 MHz Consumption: Maximum current draw is < 100 mA and typical current draw is < 50 mA at 24 V dc  
(2.4 GHz consumption is less) |
| **Construction**              | Polycarbonate housing and rotary dial cover; polyester labels; EDPM rubber cover gasket; nitrile rubber, non-sulphur cured button covers  
Weight: 0.26 kg (0.57 lbs)  
Mounting: #10 or M5 (SS M5 hardware included)  
Max. Tightening Torque: 0.56 N-m (5 lbf·in) |
| **Antenna Connection**        | Ext. Reverse Polarity SMA, 50 Ohms  
Max Tightening Torque: 0.45 N-m (4 lbf·in) |
| **Interface**                 | Indicators: Two bi-color LEDs  
Buttons: Two  
Display: Six character LCD |
| **Wiring Access**             | Two 1/2-in NPT ports |
| **Environmental Rating**      | PM2 and PM8 Models: IEC IP67; NEMA 6  
PM2C and PM8C Models: IP20; NEMA 1 |
| **Operating Conditions**      | Temperature: −40 °C to +85 °C (−40 °F to +185 °F) (Electronics); −20 °C to +80 °C (−4 °F to +176 °F) (LCD)  
Humidity: 95% max. relative (non-condensing)  
Radiated Immunity: 10 V/m, 80-2700 MHz (EN61000-4-3) |
| **Shock and Vibration**       | IEC 68-2-6 and IEC 68-2-27  
Shock: 30g, 11 millisecond half sine wave, 18 shocks  
Vibration: 0.5 mm p-p, 10 to 60 Hz |

Performance Board Modules

Sure Cross® Performance Embeddable Board Modules were specifically designed for the needs of industrial users to provide connectivity where traditional wired connections are not possible or cost prohibitive. Performance Embeddable Board Modules communicate with all Sure Cross Performance radios.

Key Features:
- Simple yet highly expandable
- Supports Point-to-Point and Star network topologies
- DIP switch mapping for up to two Nodes

Sure Cross® Multi-Hop Serial Data Radios are wireless industrial communication devices used to extend the range of Serial communication networks.

Key Features:
- DIP switches select operational modes: master, repeater or slave
- No software required for deployment
- Serial communication style (RS-232 or RS-485) is user-selectable

Sure Cross® Multi-Hop Ethernet Data Radios are wireless industrial communication devices used to create point-to-multipoint configurations of wireless Ethernet networks.

**Key Features:**
- No IP address configuration is required
- Self-healing, auto-routing RF network with multiple hops extends the network's range
- DIP switches select operational modes: master, repeater or slave
- Built-in site survey mode enables rapid assessment of a location’s RF transmission properties

Sure Cross® Ethernet Radio is an industrial grade, long range, 900 MHz radio used to create point-to-multipoint configurations of wireless Ethernet networks.

Key Features:
- DIP switches select operational modes
- FHSS radios operate and synchronize automatically
- RF transmission rate of 1.536 Mb/s and a throughput of 935 Kb/s
- 128 bit AES encryption for Ethernet data packets
- Point-to-multipoint configurations with up to 16 subscriber units

Performance Series—Gateways

Create point-to-multipoint networks that distribute I/O over large areas. Input and output types include discrete (dry contact, PNP/NPN), analog (0 to 10 V dc, 0 to 20 mA), temperature (thermocouple and RTD), and pulse counter.

Key Features:

- Enhanced Gateways offer increased range in the 900 MHz frequency band
- High density I/O capacity provides up to 12 discrete inputs or outputs or a mix of discrete and analog I/O
- Universal analog inputs allow current or voltage to be selected in the field

Performance Series—P6 Nodes

The -P6 Performance Node is an industrial radio device with a 1-wire Serial Interface that is designed to transmit data from 1-wire Serial sensors, such as the Banner Temperature and Humidity (M12FTH4Q), Vibration and Temperature (QM42VT1), or Ultrasonic (K50UX1RA) sensors.

Key Features:
- 1-wire Serial Interface
- Battery-powered models for a completely wireless solution
- Line-powered models for continuous sampling

Used with
- M12FTH4Q: Temperature and relative humidity via a 1-wire Serial Interface (see page 6)
- M12FT4Q: Temperature via a 1-wire Serial Interface (see page 6)
- QM42VT1: Vibration and temperature via a 1-wire Serial Interface (see page 10)
- K50UX1RA: Ultrasonic sensor with a 1-wire Serial Interface (see page 12)

Performance Series—P14 Nodes

The -P14 Performance Node is an industrial radio device that makes it easy to add a remote monitoring point to a wireless network. Simply select one I/O from multiple options, then wire a sensor into the easily accessible wiring terminals inside the Node. The integrated D-cell lithium battery makes it easy to deploy, even where power is not readily available.

Key Features:
- Inputs include: One configurable discrete, one configurable analog, one thermistor, one asynchronous counter
- Battery-powered models for a completely wireless solution
- Field-wireable terminal for wiring I/O

Applications:
- Door monitoring
- Tank level monitoring
- High speed counting
- Flow monitoring
- RPM monitoring
- Non-contact temperature monitoring
- Pressure monitoring

Performance Series–P15E Nodes

The P15E Performance Node enables users to wirelessly power and control any connected devices and easily monitor device status and performance. It is easy to deploy and a simple way to remotely control lights, fans, motors, and other AC-powered devices without the trouble or expense of running cable.

Key Features:
• Switch AC loads up to 10 amps
• AC-power field-wireable
• No separate power supply required
• Supply voltage of 100 to 277 V AC at 50/60 Hz

Applications:
• Remotely control lights, dimming levels, fans, and motors
• Provide power and control connectivity to remote I/O devices

Used with
- WLB92ZC1100ACT Large, ultra-bright LED work light
- WLB32ZC1130QM Adjustable LED workstation light
- K50LGRYA120Q 50 mm colored domed indicator

### Additional Details

- Radiated Immunity: 10 V/m (EN 61000-4-3)
- Maximum supply current: 0.37 A
- Maximum power consumption: 25 W
- Analog Input: 0 to 10 V, Impedance: Approximately 220 Ohms
- Sample Rate: 62.5 milliseconds
- Report Rate: 1 second or On Change of State (1% change in value)
- Accuracy: 0.2% of full scale +0.01% per °C
- Resolution: 12-bit
- Relay Outputs: SPDT (Form C) relay 277 V ac, 10 A, Minimum Mechanical Life: 10,000,000, Surge breakdown voltage (between contacts and coil)(initial): 10,000 V
- Analog Output: 0 to 10 V, Update Rate: 125 milliseconds
- Accuracy: 1.0% of full scale +0.01% per °C
- Resolution: 12-bit
- Radiated Immunity: 10 V/m (EN 61000-4-3)
- Shock and Vibration: Shock: 30g, 11 millisecond half sine wave, 18 shocks, Vibration: 0.5 mm p-p, 10 to 60 Hz
- Operating Conditions: –40 °C to +85 °C (–40 °F to +185 °F) (Electronics); –20 °C to +80 °C (–4 °F to +176 °F) (LCD)
- 95% maximum relative humidity (non-condensing)
- Environmental Rating: IEC IP65
- Certifications: IEC IP65
MultiHop Modbus Radios

MultiHop Modbus Data Radios extend the range of Modbus or other Serial communication networks. Each radio may be set to act as either a master, repeater or slave. Models are available with built in discrete and analog I/O, which can be accessed using the Modbus protocol.

Key Features:
• Self-healing, auto routing RF network with multiple hops extends the network’s range
• Flexible: DIP switch selectable to be a master, repeater or slave
• User-selectable communication between RS-485 and RS-232

MultiHop Modbus–H6

The -H6 MultiHop Modbus Data Radio has a 1-wire Serial Interface that is designed to transmit data from 1-wire Serial sensors, such as the Banner Temperature and Humidity (M12FTH4Q), Vibration and Temperature (QM42VT1), or Ultrasonic (K50UX1RA) sensors.

Key Features:
- 1-wire Serial Interface
- Battery-powered models for a completely wireless solution
- Tree topology allows for multiple hops to cover longer distances and circumvent obstacles

MultiHop Modbus–H14

The H14 MultiHop Modbus Data Radio makes it easy to add a remote monitoring point to a wireless network. Simply select one I/O from multiple options, then wire a sensor into the easily accessible wiring terminals inside the Node. The integrated D-cell lithium battery makes it easy to deploy, even where power is not readily available.

Key Features:
- Inputs include: One configurable discrete, one configurable analog, one thermistor, one asynchronous counter, and one SDI-12
- Battery-powered models for a completely wireless solution
- Tree topology allows for multiple hops to cover longer distances and circumvent obstacles
- Field-wireable terminal for wiring I/O

Applications:
- Door monitoring
- Tank level monitoring
- High speed counting
- Flow monitoring
- RPM monitoring
- Non-contact temperature monitoring
- Pressure monitoring

MultiHop Modbus-H15E

The H15E Multi-Hop Modbus Data Radio enables users to wirelessly power and control any connected devices and easily monitor device status and performance. It is easy to deploy and a simple way to remotely control lights, fans, motors, and other AC powered devices without the trouble or expense of running cable.

Key Features:
- Switch AC loads up to 10 amps
- AC power field wireable
- No separate power supply required
- Supply voltage of 100 – 277 V AC at 50/60 Hz

Applications:
- Remotely control lights, dimming levels, fans, and motors
- Provide power and control connectivity to remote I/O devices
- Use as an AC powered repeater to extend the range of the wireless network

Intrinsically Safe Nodes

Hazardous area radios are a state-of-the-art combination of wireless communication, battery technology and intrinsically safe electronics. Networks are formed using DX80 Performance Gateways installed beyond the hazardous area and one or more Nodes operating in the same frequency band.

Key Features:
- The DX99 is a state-of-the-art combination of wireless communication, battery technology and intrinsically safe electronics
- All models are certified for operation in Class I, Division 1 and ATEX Zone 0 locations
- Networks formed using DX80 Performance Gateways installed beyond the hazardous area and one or more Nodes operating in the same frequency band
- Both 900 MHz 150 mW and 2.4 GHz 63 mW models are available

**K50 and K30 Hazardous Indicators**

Banner’s K50 and K30 Indicator Lights for hazardous areas have a smooth 50 or 30 mm diameter dome that provides uniform illumination from all directions.

- Up to three colors in one device and five colors to choose from
- Models rated to IP67 and IP69K for use in harsh environments
- Unique design appears gray when OFF, eliminating false indication from ambient light
- Easy mounting and configuration
- Worldwide IECEx approval for quicker access into countries outside Europe and North America
Accessories
NOTE: The Sure Cross® Radio installation shown includes wireless accessories available from Banner. It is for illustration purposes only. Installations may vary.

### (2) Antennas

Select your antenna based on your specific application needs. There are three basic antenna solutions:

- **Use the supplied rubber duck antenna inside the enclosure.** DX80 products come with a 2 dBi rubber duck antenna. Often simply attaching the supplied antenna to the radio provides enough radio range to meet your needs.
- **Mount a dome antenna to the enclosure.** The -D antennas can be mounted directly on the enclosure.
- **Use an N-type pole-mounted antenna, with surge suppressor.** The -A and -AS antennas can be mounted remotely from the enclosure and require the BWC-LPNBMN-DC surge suppressor.

Cordsets

Euro-Style — Single-Ended

Right-angle cordsets are not compatible with the DX70 devices. When facing the Node or Gateway toward you and the quick-disconnect connection is facing down, the right-angle cables exit to the right.

When using the FlexPower® Node with integrated battery, use a double-ended cordset. When using a FlexPower® Node with external power supply, use a single-ended cordset. If using the communication lines, the cable length cannot exceed 3 meters (10 ft).

**GPS50M GPS Module**

Low power consumption, ability to withstand harsh environments, flexible power supply requirements and Modbus RTU communications makes this module ideal for the industrial market.

- Self-contained GPS Module for industrial use.
- Flexible Power Requirements: 5 to 30 V dc with power consumption as low as 100 mW
- Positional error of less than 2.5 meters
- Self-contained for harsh environment; IP69K-rated

**GPS50M GPS Module Specifications**

<table>
<thead>
<tr>
<th><strong>Power Requirements</strong></th>

Data Security

Binding the radios in a network (similar to pairing a phone to a headset, but more secure) locks them to a specific master radio by teaching them the master radio’s access code. After the devices are bound, the radios only accept data from that master radio and the master radio only accepts data from the radios that are bound to it.

The proprietary protocol used in Banner’s wireless networks provides a high level of data security. A pseudo-random frequency hopping table is used to provide noise immunity and data security. Each time a message is sent a new frequency is chosen, which makes it almost impossible for any system listening at a given time to hear more than a few messages out of hundreds.

Generic data transfer without context also keeps data secure. Even if a hacker managed to crack the data packet format, all they would see is a set of 16-bit numbers with no reference as to what the numbers mean.

Deterministic System

Determinism is the ability to predict and control network behavior by establishing default states for specific conditions. Banner’s deterministic system defines how network endpoints behave during the loss of communications. The network identifies when the communications link is lost and sets relevant outputs to user defined conditions. Once the radio signal is reestablished, the network returns to normal operations.

Example: If a tank level sensor is being used to turn a pump on to refill the tank, the deterministic system will allow you to set the default output state as “OFF” if the wireless signal is lost. With the output set at “OFF”, the pump will not be able to over fill the tank in the event of a loss of communications.

Frequency

Banner’s wireless products operate in the license free ISM band with products that operate at the 900 MHz and 2.4 GHz frequencies.

- 2.4 GHz radios transmit data packets faster and require less power. They are primarily used outside North America.
- 900 MHz radios have a longer range and a better ability to penetrate walls and other obstacles. It is typically used in North America.

Frequency Hopping Spread Spectrum (FHSS)

Frequency Hopping Spread Spectrum is a radio communication technology where the frequency spectrum is divided into channels. Data packets are split up and transmitted on these channels in a random pattern known only to the transmitter and receiver (e.g., Gateway and Node). Because colocated networks follow different random patterns, or hop code tables, multiple networks can operate in close proximity without interfering. If interference is present on one channel, data transmission is blocked. The transmitter and receiver hop to the next channel in the hop table and the transmitter resends the data packet.

Intrinsically Safe

The Sure Cross® DX99 product line is classified as intrinsically safe (IS), not explosion proof, and is certified for a variety of hazardous locations. Intrinsically safe products limit electrical and thermal energy to levels below that required to ignite a flammable or combustible atmospheric mixture in hazardous areas. Each product’s datasheet lists the specific certifications for that product.
Network Interference
The Banner wireless system can be installed within any existing 802.11b (Wi-Fi) environment. The low data rates and narrow frequency band of the Banner wireless system make it essentially silent to existing Wi-Fi networks. Additionally, Banner’s Gateways and Nodes exchange a binding code that prevents radios outside the network from communicating with it. Finally, they also use multiple frequency hops to eliminate data collisions.

Network Security
The Banner wireless systems use a proprietary protocol and are designed to completely eliminate all Internet Protocol (IP) based security threats. Open protocols, such as Wi-Fi, can route malicious TCP/IP packets that can cause security breaches; however, the Banner wireless systems cannot. The Banner protocol only carries sensor data values. It is not possible to gain access to the organization’s main network through the Sure Cross wireless system and it is not possible to receive a web page or executable file over the wireless communication layer. Only I/O data is transmitted in the Banner wireless network.

Network Topologies
Point-to-Point
The most basic form of a radio network is called point-to-point. As the name implies, there are only two radios in this network, one Gateway and one Node.

Point-to-Multipoint
Point-to-multipoint is a relatively simple network with one Gateway and a few Nodes. Banner’s PM Series is preconfigured to handle up to six Nodes.

Star
This network is formed by connecting multiple Nodes to a single Gateway. The Gateway maintains a communications connection with each Node on a separate communications path. If the communication between one of the Nodes and the gateway fails, the rest of the network remains unaffected.

Tree
This network involves several slaves that transmit information to repeaters, which ultimately transmit to the master radio. The use of repeaters can greatly extend the range of the network. This network must have a host controller that controls the master radio.

Network Scalability
Banner’s Simple Wire Replacement products come preconfigured to handle up to 6 Nodes (PM8) so that it is easy to set up your network without software. The DX80 Performance Series offers Gateways that support multiple host communication protocols and up to 47 Nodes. Data Radios can handle up to 50 slave radios, and Multi-Hop Radios can handle up to 100 slave radios.
MultiHop

A MultiHop network uses repeaters to extend the range of the network with multiple “hops” to cover longer distances or to circumvent obstacles (trees, buildings, topology, etc.). MultiHop networks are also self-forming (all radios added to the network will automatically connect to the master or a repeater within its range) and self-healing (if a repeater is removed from the network, the radios connected to it can find a new path back to the master radio).

At the root of the MultiHop network is the master radio. All radios within range of the master (whether slave or repeater) connect to it. The master serves as the parent (controls the timing of the network), repeaters and slaves connect as children.

**MultiHop Master Radio:** Within a MultiHop network, there is only one master radio. It controls the overall timing of the network and is always the parent device. The master radio must be controlled by a host system.

**MultiHop Repeater Radio:** The repeater acts as a child to the master radio and a parent to a slave radio. It retransmits data packets between the master radio and slave radios.

**MultiHop Slave Radio:** The slave radio is the end device of the network. A radio in slave mode does not retransmit data packets on the radio link.

**Radio Range**

Banner’s wireless network is designed for long distance applications. The signal for 900 MHz, 1 Watt radios will travel up to 6 miles and 2.4 GHz, 65 mW radios will travel up to 2 miles line-of-sight.

Line-of-sight is the unobstructed path between radio antennas; however, signals can penetrate walls, floors and other indoor obstructions. Buildings, trees and large metal objects will impact signal strength in outdoor applications.

To verify range, Banner integrates a site survey tool into each Gateway and Node that displays real time signal quality results. Always conduct a site survey prior to installing a wireless network.

**Time Division Multiple Access (TDMA)**

TDMA provides a specific communication time slot for each device in the network, eliminating data collisions. The master radio “requests” data from each node during its time slot, and the node then sends the data. A TDMA architecture also lends itself to efficient power management procedures. When each device knows the time period to receive or send, the radio doesn’t have to ‘listen’ all the time. Power usage can be managed efficiently, allowing radio devices to operate from 3.6 V lithium batteries when necessary.
