Sure Cross® Wireless Q45RDL Node (Remote Device with Light)

Datasheet

Sure Cross® Wireless Q45 Sensors combine the best of Banner’s flexible Q45 sensor family with its reliable, field-proven, Sure Cross wireless architecture to solve new classes of applications limited only by the user’s imagination. Containing a variety of sensor models, a radio, and internal battery supply, this product line is truly plug and play.

The Q45RDL is a compact, industrial, battery-powered device that accepts remote two dry contacts or one NAMUR input and transmits those signals to a wireless controller to track, monitor, or sense a wide range of devices while also providing local LED indication. All configuration is done through internal DIP switches or the User Configuration Software.

Benefits

• Powerful device to deliver factory automation and IIoT solutions for many applications including but not limited to:
  ◦ Retrofit an existing door position switch
  ◦ Integrate specialty third-party discrete devices
  ◦ Monitor the alignment of plastic mold pin position switches
  ◦ Sense a ball or gate valve position using Namur inputs
  ◦ Monitor security by verifying a door or gate position

• Easy-to-use rugged device that can be easily mounted to equipment
• Use with a DXM Wireless Controller to track position, count cycles, or times in different positions
• Local LED indication can be linked to any locally connected input or to other wireless inputs within the network
• Battery-powered for “peel and stick” functionality with a 2-year battery life capability

• Eliminate control wires—The Sure Cross wireless system is a radio frequency network with integrated I/O that removes the need for power and control wires

• Reduce complexity—Machine or process reconfiguration made easier; great for retrofit applications

• Deploy easily—Simplify installation on existing equipment enables deployment in remote and hard-to-access locations where implementing a wired solution would be difficult, impractical, or not cost-effective

• Selectable transmit power levels of 250 mW or 1 Watt for 900 MHz models and 65 mW for 2.4 GHz models
• DIP switches for user configuration
• Frequency Hopping Spread Spectrum (FHSS) technology ensures reliable data delivery within the unlicensed Industrial, Scientific, and Medical (ISM) band
• Transceivers provide bidirectional communication between the Gateway and Node, including fully acknowledged data transmission
• Diagnostics allow user-defined output settings in the unlikely event of lost RF signal

Important: Please download the complete Wireless Q45 Sensor Node technical documentation, available in multiple languages, from www.bannerengineering.com for details on the proper use, applications, Warnings, and installation instructions of this device.

Important: Por favor descargue desde www.bannerengineering.com toda la documentación técnica de los Wireless Q45 Sensor Node, disponibles en múltiples idiomas, para detalles del uso adecuado, aplicaciones, advertencias, y las instrucciones de instalación de estos dispositivos.

Important: Veuillez télécharger la documentation technique complète des Wireless Q45 Sensor Node sur notre site www.bannerengineering.com pour les détails sur leur utilisation correcte, les applications, les notes de sécurité et les instructions de montage.

WARNING:

• Do not use this device for personnel protection
• Using this device for personnel protection could result in serious injury or death.
• This device does not include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A device failure or malfunction can cause either an energized (on) or de-energized (off) output condition.
Models

<table>
<thead>
<tr>
<th>Model</th>
<th>Frequency</th>
<th>Inputs and Outputs</th>
</tr>
</thead>
<tbody>
<tr>
<td>DX80N9Q45RDL-QD</td>
<td>900 MHz ISM Band</td>
<td>Inputs: Two remote discrete or one Namur</td>
</tr>
<tr>
<td>DX80N2Q45RDL-QD</td>
<td>2.4 GHz ISM Band</td>
<td>Outputs: One four-color LED indicator light</td>
</tr>
</tbody>
</table>

**Important:** Because these sensors run on very low battery power, the contact wetting voltage is 3.3 volts. High voltage contacts are not designed to reliably switch these low voltages. Use a contact rated for operation at 3.3 volts.

Storage Mode

While in **storage mode**, the Q45’s radio does not operate. The Q45 ships from the factory in storage mode to conserve the battery. To wake the device, press and hold the binding button (inside the housing on the radio board) for five seconds. To put any Q45 into storage mode, press and hold the binding button for five seconds. The Q45 is in storage mode when the LEDs stop blinking.

Configuration Instructions

**Binding Button and LED Indicators**

1. Binding button
2. Red LED (flashing) indicates a radio link error with the Gateway.
3. Green LED (flashing) indicates a good radio link with the Gateway.
4. Amber LED indicates when input 1 is active. The LED is active at power up and disabled after 15 minutes to conserve power. To enable the LED for another 15 minutes, press the binding button once. To disable the LED, press the binding button 5 times.
5. DIP Switches

**DIP Switch Settings**

After making any changes to any DIP switch position, reboot the Wireless Q45 Sensor by triple-clicking the button, waiting a second, then double-clicking the button. By default, the DIP switches are in the OFF position. To turn a DIP switch on, push the switch toward the battery pack. DIP switches are numbered from left to right.

* Default position

<table>
<thead>
<tr>
<th>Description</th>
<th>DIP Switches</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transmit power: 1 Watt</td>
<td>OFF *</td>
</tr>
<tr>
<td>Transmit power: 250 mW (compatible with 150 mW radios)</td>
<td>ON</td>
</tr>
<tr>
<td>Light mode: flashing</td>
<td>OFF *</td>
</tr>
<tr>
<td>Light mode: solid</td>
<td>ON</td>
</tr>
<tr>
<td>Reserved</td>
<td>OFF *</td>
</tr>
</tbody>
</table>

**DIP Switches for Dry Contact Input Mode (DIP Switch 5 OFF)**

<table>
<thead>
<tr>
<th>Description</th>
<th>DIP Switches</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dry contact input mode</td>
<td>OFF *</td>
</tr>
<tr>
<td>3.3 V contact wetting voltage</td>
<td>OFF *</td>
</tr>
<tr>
<td>5.5 V contact wetting voltage</td>
<td>ON</td>
</tr>
<tr>
<td>Two dry contact inputs</td>
<td>OFF *</td>
</tr>
</tbody>
</table>
DIP Switches

<table>
<thead>
<tr>
<th>Description</th>
<th>DIP Switches</th>
</tr>
</thead>
<tbody>
<tr>
<td>One dry contact input</td>
<td>ON</td>
</tr>
<tr>
<td>62.5 millisecond sample rate</td>
<td>OFF *</td>
</tr>
<tr>
<td>250 millisecond sample rate</td>
<td>ON</td>
</tr>
</tbody>
</table>

To extend the battery’s life:
- Select one dry contact input when only one is being used.
- Use the slower sample rate of 250 ms when a high-speed response is not required.

DIP Switches for Namur Input Mode (DIP Switch 5 ON)

<table>
<thead>
<tr>
<th>Description</th>
<th>DIP Switches</th>
</tr>
</thead>
<tbody>
<tr>
<td>Namur input mode</td>
<td>ON</td>
</tr>
<tr>
<td>5.5 V sensor voltage</td>
<td>OFF *</td>
</tr>
<tr>
<td>8.2 V sensor voltage</td>
<td>ON</td>
</tr>
<tr>
<td>2 millisecond warmup time, 62.5 ms sample rate</td>
<td>OFF *</td>
</tr>
<tr>
<td>2 millisecond warmup time, 250 ms sample rate</td>
<td>OFF *</td>
</tr>
<tr>
<td>5 millisecond warmup time, 125 ms sample rate</td>
<td>ON</td>
</tr>
<tr>
<td>5 millisecond warmup time, 500 ms sample rate</td>
<td>ON</td>
</tr>
</tbody>
</table>

To extend battery life, select the slower sample rates when a high-speed response is not required.

To use with Turck’s Bi2-M12-Y1X-H1141, Bi5-M18-Y1X-H1141 Namur proximity sensor, set DIP switch 5 to ON and DIP switches 6 through 8 to OFF.
To use with Turck’s Bi10-M30-Y1X-H1141 Namur proximity sensor, set DIP switch 5 and 7 to ON and DIP switches 6 and 8 to OFF.
Use cable MQDEC-406SS (male to female cable) to connect the Namur sensors to the Wireless Q45 Sensor - Remote Device model’s interface.

Transmit Power Levels

The 900 MHz radios transmit at 1 Watt (30 dBm) or 250 mW (24 dBm). While the Performance radios operate in 1 Watt mode, they cannot communicate with the older 150 mW radios. To communicate with 150 mW radios, operate this radio in 250 mW mode. For 2.4 GHz models, this DIP switch is disabled. The transmit power for 2.4 GHz is fixed at about 65 mW EIRP (18 dBm), making the 2.4 GHz Performance models automatically compatible with older 2.4 GHz models.

</tr>
</tbody>
</table>

To use with Turck’s Bi2-M12-Y1X-H1141, Bi5-M18-Y1X-H1141 Namur proximity sensor, set DIP switch 5 to ON and DIP switches 6 through 8 to OFF.
To use with Turck’s Bi10-M30-Y1X-H1141 Namur proximity sensor, set DIP switch 5 and 7 to ON and DIP switches 6 and 8 to OFF.
Use cable MQDEC-406SS (male to female cable) to connect the Namur sensors to the Wireless Q45 Sensor - Remote Device model’s interface.

Wiring for Dry Contact Mode

Wiring for Namur Mode

P/N 204703 Rev. D  www.bannerengineering.com - Tel: + 1 888 373 6767 3
Wiring for Externally Powered Sourcing Sensors

Voltage at the discrete IN:
- 0 V to 1 V = OFF
- 2 V to 5 V = ON
- More than 6 V will damage the Q45 sensor’s input

Internal resistance is 800 Ohms. To connect the Wireless Q45 Sensor to a 24 V sourcing output, add a 3.0 KOhm to 5.6 KOhm external resistor in series to reduce the voltage applied to the Q45 Sensor’s discrete input to less than 6 V.

R = 3.0 to 5.6 KOhm at 24 V

Bind to the Gateway and Assign the Node Address

Before beginning the binding procedure, apply power to all the devices. Separate the devices by two meters when running binding procedure. Put only one Gateway into binding at a time to prevent binding to the wrong Gateway.

1. Enter binding mode on the Gateway.
   - For housed DX80 Gateways, triple-click button 2 on the Gateway. Both LEDs flash.
   - For Gateway board modules, triple-click the binding button. The green and red LED flashes.
2. Assign the Q45 a Node address using the Gateway’s rotary dials. Use the left rotary dial for the left digit and the right rotary dial for the right digit. For example, to assign your Q45 to Node 10, set the Gateway’s left dial to 1 and the right dial to 0. Valid Node addresses are 01 through 47.
3. Loosen the clamp plate on the top of the Q45 and lift the cover.
4. Enter binding mode on the Q45 by triple-clicking the Q45’s binding button. The red and green LEDs flash alternately and the sensor searches for a Gateway in binding mode. After the Q45 is bound, the LEDs stay solid momentarily, then they flash together four times. The Q45 exits binding mode.
5. Label the sensor with the Q45’s Node address number for future reference.
6. Repeat steps 2 through 5 for as many Q45s as are needed for your network.
7. After binding all Q45s, exit binding mode on the Gateway.
   - For housed DX80 Gateways, double-click button 2 on the Gateway.
   - For board-level DX80 Gateways, double-click the binding button on the Gateway.

For Gateways with single-line LCDs: After binding your Q45 to the Gateway, make note of the binding code displayed under the Gateway’s “DVCFG menu, XADR submenu on the LCD. Knowing the binding code prevents having to re-bind all Q45s if your Gateway is ever replaced.

Bind to a DXM Gateway and Assign the Node Address

Before beginning the binding procedure, apply power to all the devices. Separate radios by two meters when running binding procedure. Put only one DXM Gateway into binding at a time to prevent binding to the wrong Gateway.

1. On the DXM radio using the arrow keys select the ISM Radio menu on the LCD and click ENTER.
2. Highlight the **Binding** menu and click **ENTER**.
3. Use the arrow keys to select the Node address to bind the Q45 to.
4. Loosen the clamp plate on the top of the Q45 and lift the cover.
5. Enter binding mode on the Q45 by triple-clicking the power/binding button.
   The red and green LEDs flash alternately and the sensor searches for a Gateway in binding mode. After the Q45 binds, the LEDs stay solid momentarily, then they flash together four times. The Q45 exits binding mode.
6. Label the sensor with the Q45’s Node address number for future reference.
7. Click **BACK** on DXM to exit binding for that specific Node address.
8. Repeat steps 3 through 7 changing the Node address for as many Q45s as are needed for your network.
9. Click **BACK** on DXM until back to the main menu when finished binding.

Replace or Install the Batteries

To replace the lithium "AA" cell battery, follow these steps. As with all batteries, these are a fire, explosion, and severe burn hazard. Do not burn or expose them to high temperatures. Do not recharge, crush, disassemble, or expose the contents to water. Properly dispose of used batteries according to local regulations by taking it to a hazardous waste collection site, an e-waste disposal center, or other facility qualified to accept lithium batteries.

1. Lift the plastic cover.
2. Slide the board containing the batteries out of the Q45 housing.
3. Remove the discharged batteries and replace with new batteries. Use two 3.6 V AA lithium batteries, such as Xeno’s XL-60F or equivalent.
4. Verify the battery’s positive and negative terminals align to the positive and negative terminals of the battery holder mounted within the case. Caution: There is a risk of explosion if the battery is replaced incorrectly.
5. Slide the board containing the new batteries back into the Q45 housing.

The replacement battery model number is BWA-BATT-006. For pricing and availability, contact Banner Engineering.

Q45RDL Specifications

Externally Powered Sourcing Sensors
ON Condition: 2 V to 5 V
OFF Condition: Less than 1 V

Construction
Molded reinforced thermoplastic polyester housing, oring-sealed transparent Lexan® cover, molded acrylic lenses, and stainless steel hardware. Designed to withstand 1200 psi washdown.

Indicators
Red and green LEDs (radio function); amber LED indicates when input 1 is active

Default Sample Rate
62.5 milliseconds (dry contact) or 125 milliseconds (Namur)

Report Rate
On Change of State

Typical Battery Life for One Dry Contact Input
Up to 3 years at a 62.5 ms sample rate or 250 ms sample rate. Assumes an average of 20 seconds between changes of state and a Gateway heartbeat setting of 30 seconds.

Typical Battery Life for Bi2 and Bi5 Namur Inputs
Up to 2 years at a 2 ms warmup time and 62.5 ms sample rate; 4 years at a 2 ms warmup time and 250 ms sample rate.

Typical Battery Life for Bi10 Namur Inputs
Up to 2 years at a 5 ms warmup time and 125 ms sample rate; 4 years at a 5 ms warmup time and 500 ms sample rate.

Certifications

Environmental Specifications

Operating Conditions
-40 °C to +70 °C (–40 °F to +158 °F); 90% at +50 °C maximum relative humidity (non-condensing)
Radiated Immunity: 10 V/m (EN 61000-4-3)

Environmental Rating
NEMA 6P, IEC IP67
Operating the devices at the maximum operating conditions for extended periods can shorten the life of the device.

Mounting Brackets

- Q45 Wireless sensors can be mounted with double-sided tape or with bracket options below
- -NH models are supplied with two (2) mounting screws and nuts

Use with the -NH models:

SMB30MM
- 12-ga. stainless steel bracket with curved mounting slots for versatile orientation
- Clearance for M6 (¼ in) hardware
- Mounting hole for 30 mm sensor

Hole center spacing: A = 51, A to B = 25.4
Hole size: A = 42.6 x 7, B = ø 6.4, C = ø 30.1

SMB30SC
- Swivel bracket with 30 mm mounting hole for sensor
- Black reinforced thermoplastic polyester
- Stainless steel mounting and swivel locking hardware included

Hole center spacing: A = ø 50.8
Hole size: A = ø 7.0, B = ø 30.0

SMB30FA
- Swivel bracket with tilt and pan movement for precise adjustment
- Mounting hole for 30 mm sensor
- 12-ga. 304 stainless steel
- Easy sensor mounting to extrude rail T-slot
- Metric and inch size bolt available

Bolt thread: SMB30FA, A= 3/8 - 16 x 2 in; SMB30FAM10, A= M10 - 1.5 x 50
Hole size: B = ø 30.1

SMB30RAVK
- V-clamp, right-angle bracket and fasteners for mounting sensors to pipe or extrusion
- Clamp accommodates 28 mm dia. tubing or 1 in. square extrusions
- 30 mm hole for mounting sensors

Hole size: A = ø 30.5
Banner Engineering Corp. Limited Warranty

Banner Engineering Corp. warrants its products to be free from defects in material and workmanship for one year following the date of shipment. Banner Engineering Corp. will repair or replace, free of charge, any product of its manufacture which, at the time it is returned to the factory, is found to have been defective during the warranty period. This warranty does not cover damage or liability for misuse, abuse, or the improper application or installation of the Banner product.

This limited warranty is exclusive and in lieu of all other warranties, whether express or implied (including, without limitation, any warranty of merchantability or fitness for a particular purpose), and whether arising under course of performance, course of dealing or trade usage.

This Warranty is exclusive and limited to repair or, at the discretion of Banner Engineering Corp., replacement. IN NO EVENT SHALL BANNER ENGINEERING CORP. BE LIABLE TO BUYER OR ANY OTHER PERSON OR ENTITY FOR ANY EXTRA COSTS, EXPENSES, LOSSES, LOSS OF PROFITS, OR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM ANY PRODUCT DEFECT OR FROM THE USE OR INABILITY TO USE THE PRODUCT, WHETHER ARISING IN CONTRACT OR WARRANTY, STATUTE, TORT, STRICT LIABILITY, NEGLIGENCE, OR OTHERWISE.

Banner Engineering Corp. reserves the right to change, modify or improve the design of the product without assuming any obligations or liabilities relating to any product previously manufactured by Banner Engineering Corp. Any misuse, abuse, or improper application or installation of this product or use of the product for personal protection applications when the product is identified as not intended for such purposes will void the product warranty. Any modifications to this product without prior express approval by Banner Engineering Corp. will void the product warranty. All specifications published in this document are subject to change; Banner reserves the right to modify product specifications or update documentation at any time. Specifications and product information in English supersede that which is provided in any other language. For the most recent version of any documentation, refer to: www.bannerengineering.com.

For patent information, see www.bannerengineering.com/patents.

Exporting Sure Cross® Radios

Exporting Sure Cross® Radios. It is our intent to fully comply with all national and regional regulations regarding radio frequency emissions. Customers who want to re-export this product to a country other than that to which it was sold must ensure the device is approved in the destination country. The Sure Cross wireless products were certified for use in these countries using the antenna that ships with the product. When using other antennas, verify you are not exceeding the transmit power levels allowed by local governing agencies. This device has been designed to operate with the antennas listed on Banner Engineering’s website and having a maximum gain of 9 dBm. Antennas not included in this list or having a gain greater that 9 dBm are strictly prohibited for use with this device. The required antenna impedance is 50 ohms. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen such that the equivalent isotropically radiated power (EIRP) is not more than that permitted for successful communication. Consult with Banner Engineering Corp. if the destination country is not on this list.

Notas Adicionales

Información México: La operación de este equipo está sujeta a las siguientes dos condiciones: 1) es posible que este equipo o dispositivo no cause interferencia perjudicial y 2) este equipo debe aceptar cualquier interferencia, incluyendo la que pueda causar su operación no deseada.

Banner es una marca registrada de Banner Engineering Corp. y podrán ser utilizadas de manera indistinta para referirse al fabricante. "Este equipo ha sido diseñado para operar con las antenas tipo Omnidireccional para una ganancia máxima de antena de 6 dBi y Yagi para una ganancia máxima de antena 10 dBi que en seguida se enlistan. También se incluyen aquellas con aprobación ATEX tipo Omnidireccional siempre que no excedan una ganancia máxima de antena de 6dBi. El uso con este equipo de antenas no incluidas en esta lista o que tengan una ganancia mayor que 6 dBi en tipo omomdireccional y 6 dBi en tipo Yagi, quedan prohibidas. La impedancia requerida de la antena es de 50 ohms."
