

IO-Link Data Reference Guide: QS18 Clear Object Detector

IO-Link Data Map

This document refers to the following IODD file: Banner_Engineering-QS18EK6XLPCxx-20161206-IODD1.1.xml. The IODD file and support files can be found on www.bannerengineering.com under the download section of the product family page.

Communication Parameters

The following communication parameters are used.

Parameter	Value	Parameter	Value
IO-Link revision	V1.1	Port class	A
Process Data In length	8 bits	SIO mode	Yes
Process Data Out length	N/A	Smart sensor profile	Yes
Bit Rate	38400 bps	Block parameterization	Yes
Minimum cycle time	4 ms	Data Storage	Yes

IO-Link Process Data In (Device to Master)

Process Data In is transmitted cyclically to the IO-Link master from the IO-Link device.

The QS18EK6XLPC IO-Link Process Data is 8 bits in size and includes the state of the output channel and the health state of the sensor. This information is sent to the IO-Link master every 2.3 ms.

Process Data Input			
Subindex	Name	Number of Bits	Data Values
1	Output State	1	1=C/Q Output Active, 0=Inactive
2	Health State	1	1=Sensor is Healthy, 0=Unhealthy

Example								
Subindex	////	////	////	////	////	////	2	1
Bit offset	7	6	5	4	3	2	1	0
Value	N/A	N/A	N/A	N/A	N/A	N/A	0	1
Example	---	---	---	---	---	---	Unhealthy	Active

IO-Link Process Data Out (Master to Device)

Not applicable.

Parameters Set Using IO-Link

These parameters can be read from and/or written to an IO-Link model of the QS18EK6XLPC sensor. Also included is information about whether the variable in question is saved during Data Storage and whether the variable came from the IO-Link Smart Sensor Profile.

Unlike Process Data In, which is transmitted from the IO-Link device to the IO-Link master cyclically, these parameters are read or written acyclically as needed.

IO-Link Events

Events are acyclic transmissions from the IO-Link device to the IO-Link master. Events can be error messages and/or warning or maintenance data.

Code	Type	Description
25376 (0x6320)	Error	Parameter error (The last command would have resulted in an invalid set of device parameters. Check the parameter table and user manual for valid parameter values.)
