PS15-1

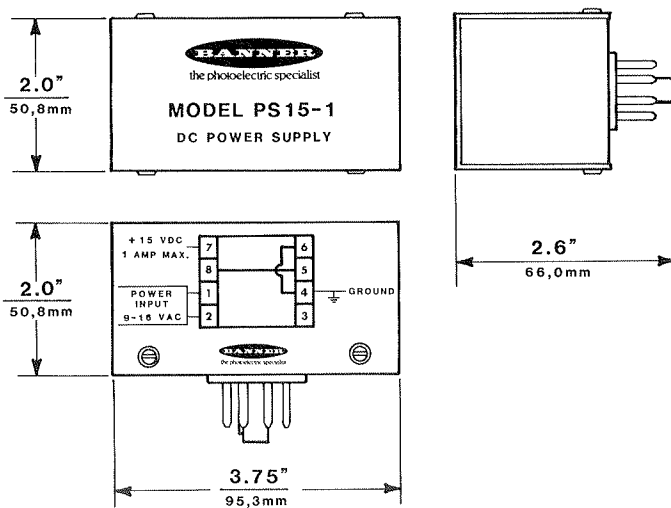

DESCRIPTION

The PS15-1 is an accessory required in some Systems applications where DC is required to operate DC Scanners or Plug-Logic modules, but where no "M" or "B" Series modules are being used. In these cases, it is not sufficient to use the MRB or BRB control chassis alone, since the transformer outputs are not pure, filtered DC.

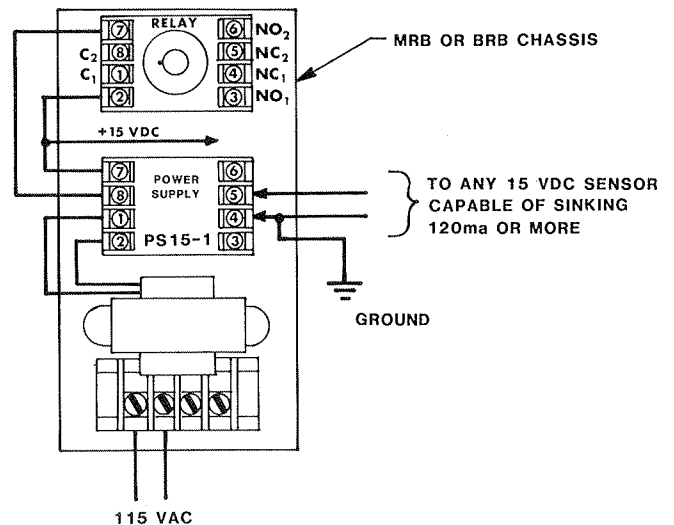

The PS15-1 is an inexpensive power supply module that may be plugged into the first socket of any of the control chassis; it will then provide filtered DC power to the other devices, limited only by the current rating of the chassis transformer (typically 500 milliamps). NOTE: the PS15-1 is not needed if there are one or more "M" or "B" Series amplifiers in the system.
