PS120-15

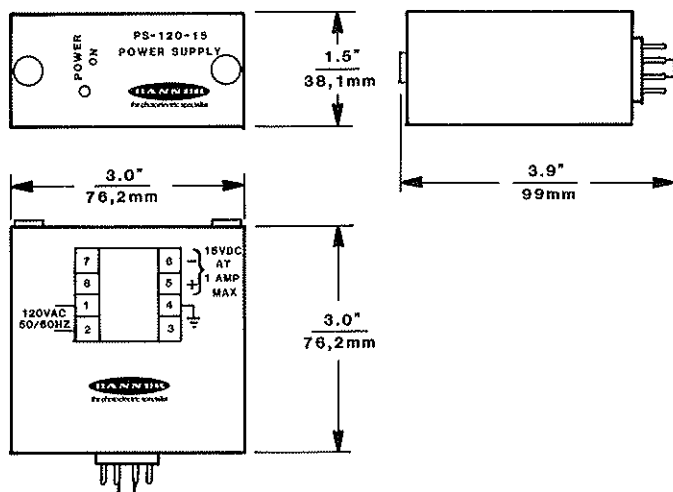

DESCRIPTION

The PS120-15 is a complete 15 VDC power supply in an octal-based plug-in package. It is for use in custom panels that do not contain the MRB or BRB Series control chassis. Supply voltage is 105-130 VAC, 50/60 Hz, and output is 15 VDC at up to 1 amp (suitable for powering a number of modules, DC scanners, and output devices). An indicator LED on the cover verifies that the DC output voltage is present.

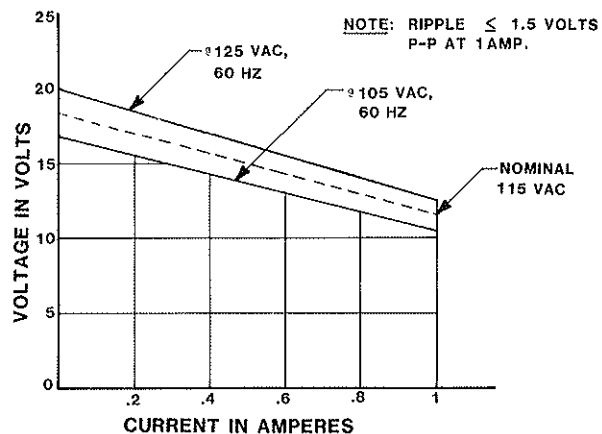

The PS120-15 is housed in a taller package than most of the Banner logic and amplifier modules; this should be taken into account when laying out panel height clearance and when ordering module hold-down clamps.
