Touch Devices

Touch devices have the following animations available to them:

Animations	Description
Off	Device or segment is off
Steady	Color 1 is on at the defined intensity
Flash	Color 1 flashes at the defined speed, color intensity, and pattern (normal, strobe, three pulses, SOS, or random)
Two Color Flash	Color 1 and Color 2 flash alternately at the defined speed, color intensities, and pattern (normal, strobe, three pulses, SOS, or random)
50/50	Color 1 displays on 50% and Color 2 displays on the other 50% statically at the defined color intensities

Continued on page 6

Continued from page 5

Animations	Description
50/50 Rotate	Color 1 displays on 50% and Color 2 displays on the other 50% while rotating at the defined speed, color intensities, rotational direction
Chase	Color 1 is displayed as a single spot against the background of Color 2 while rotating at the defined speed, color intensities, rotational direction
Intensity Sweep	Color 1 continuously increases and decreases intensity between 0% to 100% on each device or on every segment at the defined speed and color intensity
Demo	Demo sequence cycles through several sets of colors and configurations to highlight example applications

When a touch device is connected, **Device Logic Mode** configuration displays.

By default, when a touch device is connected, Pro Editor opens **Device Logic Mode** configuration populated with the configuration written to the device. If no device logic mode is selected, use the **Device Logic Mode** drop-down to select a logic mode, then write the configuration to the device. Two **Device Logic Modes** are available:

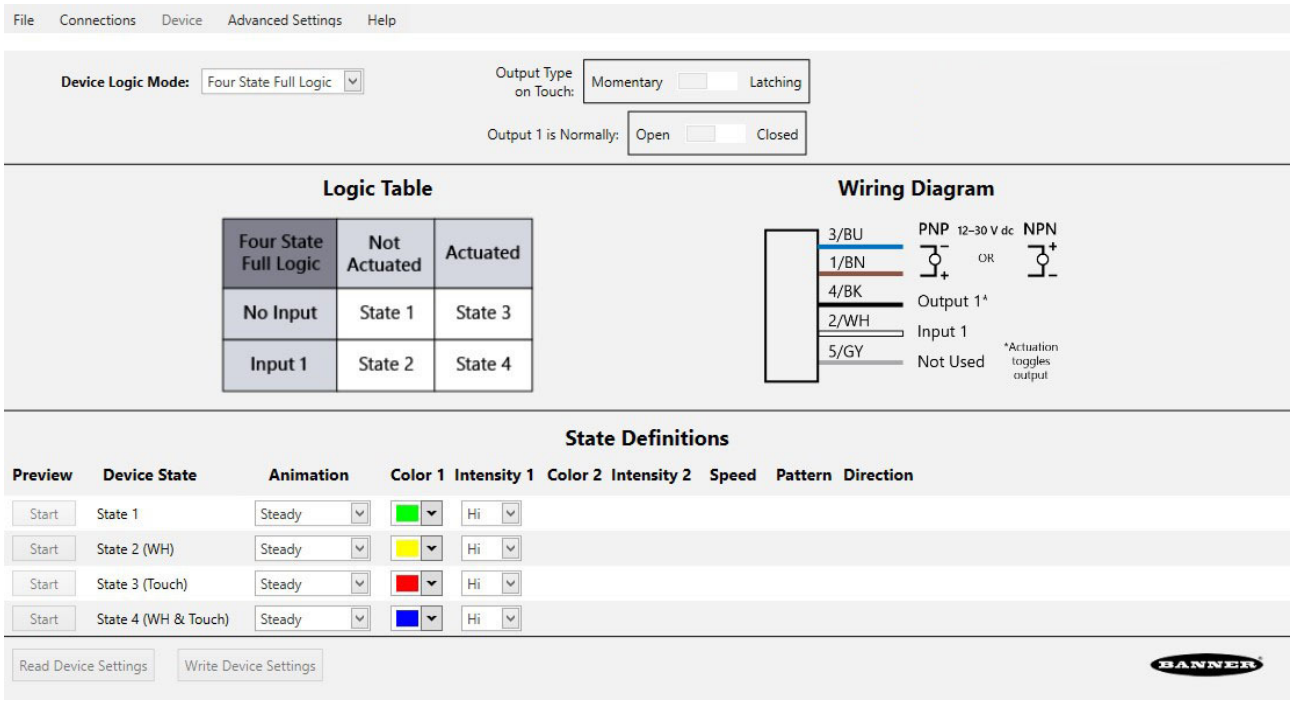
- Four State Full Logic
- Three State Advanced Control

Device Logic Mode – Four State Full Logic

When using Four State Full Logic, four device states are activated by one input wire and the touch button. The touch button also toggles the output(s).

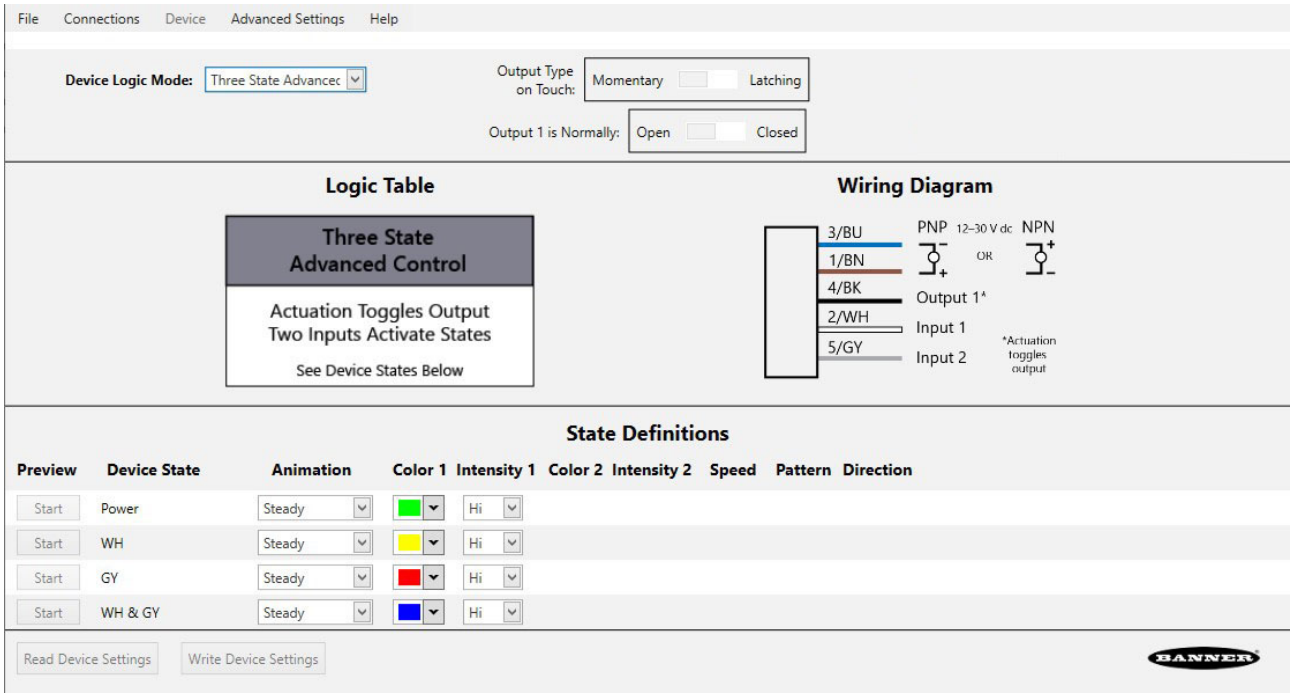
Assuming power is on using the blue and brown wires:

State 1: Input Inactive, Touch Inactive
State 2: Input Active, Touch Inactive
State 3: Input Inactive, Touch Active
State 4: Input Active, Touch Active



Device Logic Mode – Three State Advanced Control

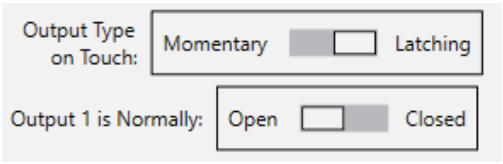
When using Three State Advanced Control, four device states are activated by two input wires. The touch button toggles the output(s) with no device state change.



Global Parameters and Advanced Settings

When connected to the K50 Pro Select Touch device, the following global parameters appear in the configuration display.

K50 Pro Select Touch Global Parameters – Pro Editor

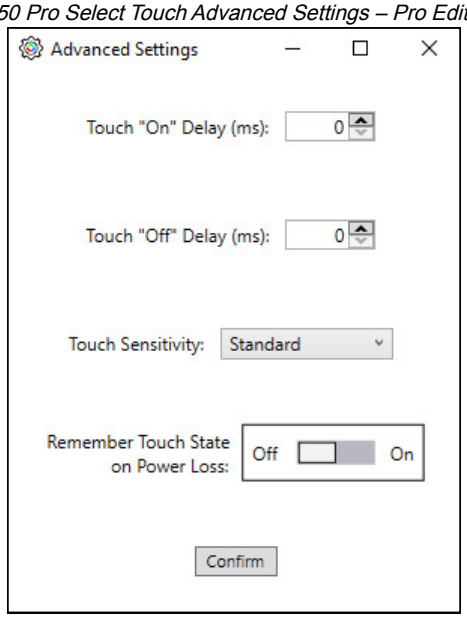


K50 Pro Select Touch Parameter	Description
Output Type on Touch	In Momentary mode, the output only toggles while the touch button is touched. In Latching mode, the output toggles each time the touch button is pressed.[(2)]
Output 1 is Normally	In Open mode, output 1 is turned ON with touch input. In Closed mode, output 1 is turned OFF with touch input.

When an actuator device is connected, the following **Advanced Settings** can be accessed by clicking on the **AdvancedSettings** menu.

[(2)] When **Output Type on Touch** is set to Latching mode, output state and device state transitions both occur on the leading edge of touch input.

K50 Pro Select Touch Advanced Settings – Pro Editor



K50 Pro Select Touch Setting	Description
Touch "On" Delay (ms)	The length of time the touch button needs to be pressed to trigger "touch active" state.
Touch "Off" Delay (ms)	The length of time before the device returns to "touch inactive" state after the touch button is released.
Touch Sensitivity	The touch button is easily toggled in High mode, and resists unintentional toggling in Low mode.
Remember Touch State on Power Loss	When the Global Parameter **Output Type on Touch** is set to Latching the **Remember Touch State on Power Loss** setting, determines whether touch state should be reset or retained when power is restored. When ON the touch state will be retained when power to the device is lost. When OFF the touch state will be reset when power to the device is lost.
