PRESS RELEASE

Banner Engineering Significantly Expands its EPLAN Product Portfolio to Enable More Efficient Machine and Plant Systems Design

MINNEAPOLIS — Industrial automation manufacturer, [Banner Engineering](#), announced the expansion of its presence in [EPLAN](#)'s data portal. The company has uploaded close to 2,000 parts for users to incorporate into their project designs efficiently.

Banner Engineering's safety products underpin this latest product portfolio expansion. Safety controllers, safety relays, and safety light curtains are a fast and growing segment of industrial automation. Each of the newly added parts features a corresponding macro diagram; engineers who use the [Data Portal](#) can quickly search for and incorporate these Banner products into their designs.

"Banner is excited to make more of our product data available to customers through EPLAN's Data Portal," said Vice President of Marketing at Banner Engineering, Tytus VanMatre. "It enables them to effortlessly incorporate a vast portfolio of products and solutions into their equipment designs. We intend to continue growing Banner's product availability on the portal to better support our customers."

Only about half of manufacturers with parts in the Data Portal have included enough part data to meet the EPLAN Data Standard. "All of our data adheres to this standard," said Stewart Sawdey, Data Analyst Manager at Banner Engineering. "Designers can be confident that they are using parts with complete, high-quality data." When searching for parts in the EPLAN Data Portal, designers can filter parts based on those that meet the EPLAN Data Standard, saving them time and reducing costly errors.

Banner Engineering manufactures industrial automation products that include sensors, smart IIoT and industrial wireless products, LED lights and indicators, machine safety equipment, as well as barcode scanners and machine vision devices. These products help produce the cars we drive, the food we eat, the medicine we take, and many of the things we touch every day. Headquartered in Minneapolis since 1966, Banner is an industry leader with more than 10,000 active products, operations on six continents, and a worldwide team of over 5,500 employees. Every 2 seconds a Banner product is installed somewhere in the world. Online at BannerEngineering.com
